MuchMore software includes the Reventon Pro server software, which it shipped with the Reventon Pro. Like the PC version, it has a memory back-up. The server software is much more powerful than the PC version, and only the server version of software is able to receive and respond to email, using the Reventon Pro as an intermediary. To use the server software, it must be installed on a separate PC, and is referred to as the "server." To install the server, one must have a copy of the MuchMore PC program that was shipped with the Reventon Pro. + However, if you have the Reventon Pro installed on a different PC, you can still use the server software on the second PC. You simply have to have MuchMore software on the first PC. After installing the server software on the second PC, you must then use the Reventon Pro on the first PC to connect to the server software on the second PC. If you decide to use the server software on the first PC, you'll first have to connect the first PC to the second PC. If you do this, and are running Reventon Pro (VRC Pro 2.1.1) software on the first PC, you must change the settings for this connection. In order to do this, you must select the first PC and then select the "PC Options" button on the first PC. You'll see a list of the two PCs and their respective connections. You must enter a name and password for each PC, and set the data source (server) to the first PC. Once you've entered the settings for the second PC, you must open the MuchMore PC program on the first PC, and follow the prompts. Once this is complete, the Reventon Pro software on the first PC will connect to the server software installed on the second PC. If you have an older version of the Reventon Pro software on the first PC (older than version 3.7.4), you can still use the server software if you have the older version of MuchMore software. You can open the "PC Options" button on the first PC and follow the prompts in the MuchMore PC program. 520fdb1ae7
