

Mirah Quick Start Guide – Using Mirah Remotely with Your Patients

We are experiencing unpredictable times as we quickly adapt to the emergence of the COVID-19 virus. Mirah's goal is to help you to receive the highest level of care during these uncertain times.

Mirah Reinforces the Patient-Clinician therapeutic relationship through:

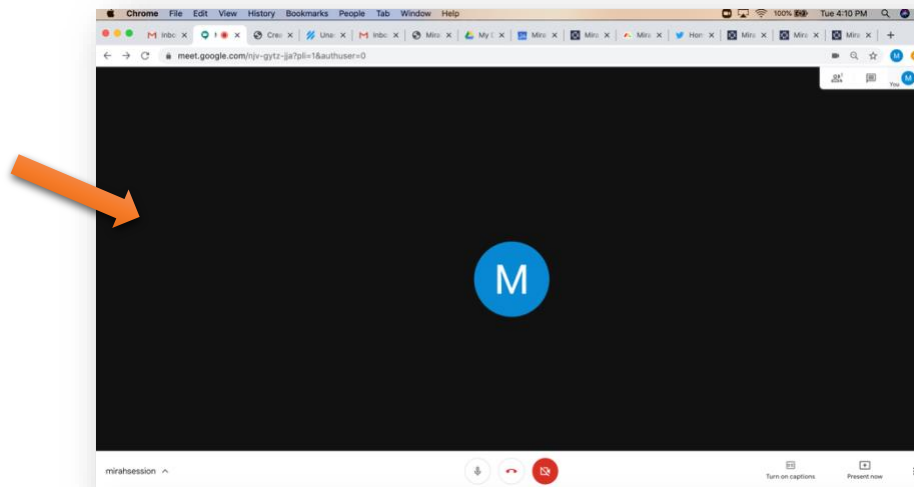

- ✓ **COMMUNICATION:** Mirah helps keep the lines of communication open between client and clinician. Important non-verbal cues may not be visible now, but Mirah's patient feedback reports provide additional needed insight into patient status, progress, and current concerns.
- ✓ **ENGAGEMENT:** Mirah's patient feedback reports give clinicians the tools needed to ask meaningful questions and open a patient-centered dialogue.
- ✓ **GROUNDING:** Mirah is a reliable partner in patient care that gives clinicians a starting point for discussion with patients regardless of location.

Using Mirah with your selected telehealth platform

- Mirah is telehealth platform agnostic. We can work seamlessly with most solutions. All you need is your web browser (e.g., Chrome, Safari, Internet Explorer, etc.) and an internet connection.

1

Open your telehealth platform (in this example we use Google Hangouts)

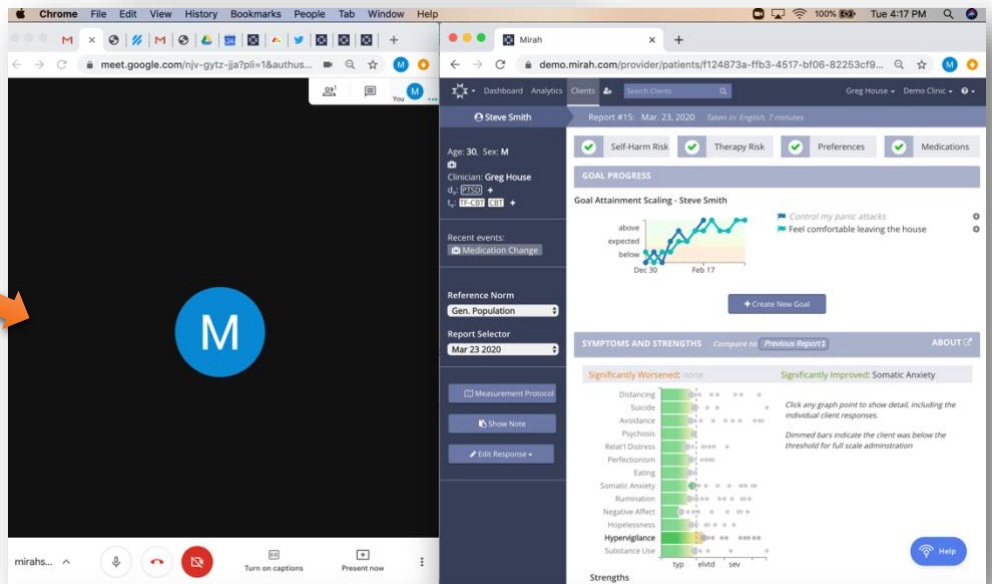

2

Go to your browser window, and select the option to “open a new window” (usually under “File”)

3

Open Mirah in the new window and log in to your site. Resize both open browser windows so that the screens appear side by side.

4

You can open a “text” or notes app and resize that so that it appears below your open browser windows. Use that space to take notes while you talk to your patient.
