Hacking cannot be done without tools. These tools are the basis of hacking. Today we are going to provide you with some details about Parrot Linux. A Linux distribution that is useful for hackers to grow some knowledge and practice it. Parrot Linux Set - Parrot OS 3.11 The latest version of parrot Linux Parrot Review is a very simple operating system that is very user-friendly for the OS used for hacking. Many tools and software packages are already packed into it. This bunch of software is used for hacking as well as other daily use. This is closely related to Debian Linux. The new release has so many new improvements and security fixes compared to previous versions. Updated version of Linux kernel 4.14. The new car hacking menu now contains a collection of useful open source tools in the automotive industry to test real-world cars or simulate CANBus networks. Metasploit and postgresql are now fixed to work flawlessly out of the box in live mode. Other important Include Firefox 58, increased installation stability, many updated security tools some important graphic improvements. Parrot Studio has been rediscovered with a lot of improvements, this special parrot derivative is designed for multimedia production as an improved version of Parrot Home for workstations, with many useful performance tools pre-installed. This release will probably be the last version of the 3.x series (except for possible security updates) and we would like to include some of the changes we planned for parrot 4.x as a gift to our community. Book to learn Parrot OS Features and Specs Parrot Linux - Parrot Security OS Tutorial PDF Parrot Linux is based on Kernel 4.1 and debian 8. This desktop is based on MATE. Display manager lightdm. There are many features in this linux that specifically places it as unique. Parrot Linux Features - Parrot OS Tools Anti-Forensic Tools is a very unique feature that sets it apart from other Linux OS. Tools that can encrypt a file, section, or entire disk. As it is there are many other anti-forensic tools that can be used by businesses to protect their data. Pandora's Box This tool is a very useful tool for a forensic expert. As you know, the data used by the computer is temporarily stored in RAM and erased after the computer is turned off. The above allegation is partly false. Pandora's Box is a tool that is used by a forensic expert to recover data that was on RAM after a stop. This can reveal all the details or tasks that the previous user has accomplished. This tool will ask you to select data for secret storage when the user is about to disable the system. This tool can only be activated by a super user. Pandora's box can remove data from RAM if necessary. RAM Only Surfing This browser is called iceweasel, which will travel online but will provide any access to the hard drive. The data you access in your browser cannot be seen by other users. But still there will be a question that the data in RAM can be accessed, Pandora's box will take care of it. Anonymous Surfing There is a tool known as Anonsurf that helps in surfing the internet without leaving any trace of your identity. This is done by the TOR browser. All user traffic will be directed by the TOR browser. TOR networks are active in India, so anonymous surfing can be easy to do. It will also hide your DNS via TOR. Penetration testing is one of the critical tests of software or network. This type of testing helps the hacker learn about anomalies in the system. Once he's About errors in this system it can help the owner of the system to increase security to him. Although this information can be used in some unethical ways too. I'm not suggesting you think that. There are many tools by which pen testing can be done. Some are a pack sniffer, a man in the middle of an attack, brute force attacks, etc. In using Linux, then you should know about the tools used in Cali and Backtrack Linux, it would be very easy to include on Parrot Linux. This is a very brief introduction about Parrot Linux. This will help users learn more about Parrot Linux. In the next section, I'll talk about installing Parrot Linux. Parrot OS Team Tutorial PDF sudo :- This team is used to gain admin access after you enter the admin password.su :- This command for Root Access.apt-get installation: - This team install tools from Distro Server.apt-get update: - This team is used to check the repository update from the Distro server. Parrot Security OS System Requirements System Requirements for Parrot are: processor: x86 with at least 700MhzArchitecture: i386, amd64 (x86-64bit), 486 (legacy x86), amd64, and armhfRAM: at least 256 MB for i386 and 320MB for amd64. 512MB recommendedGPU: No graphic acceleration required by HDD: 16GB needed to installBOOT: Legacy bios prefer to buy these Linux Books to get Kick Start's Linux Career APT-get update: - This is used to download repository updates from the Distro.git clone server: - This team is used to clone any file from GitHub Website.cd. . . - Team to go back one step in the catalog.clearly: - This team is used to clean Terminal.poweroff :- This team is to turn off the system.9. chmod x Example.py: - This command adds you complied with the permission to file.
