Yes, you can play the game without it, but you won't have access to all the mods and content that really sets this game apart from others. If you have a problem with this, just shut up and sign up anyway. You'll thank me afterwards. 1: Get version 7.5:magnet:?xt=urn:btih:2589440A04E4689AF159A742CD256ED3535EEBCEC-E7D963A%2F2FZKrawler.openbittorrent.com%3A80%2Fannounce. This is a magnetic link. This means that you need a torrent program to open it. uTorrent is universal. The zbitorrent works well as well as if you prefer that, but some issues have been reported with the flood. Everything else, read /! sticky 2: Set 7.5:Just run .exe and choose the path you want it to go. It is recommended to install it in c: (default position) rather than in the program file folder, as this can cause some complications.3: Get Hook Hook is a term for filter/post processing to add to TK17. If you don't work the hook, there's no point in playing, since the game will look bland and outdated without it. Hook 4 is the current standard for the game. This guide will set out how to install and use it. However, Hook 4 is a massive performance hog. There are previous versions of the hook such as 3 and then 2 available. Hook 3 is still a good alternative if your computer is slow, the graphics are not so awesome, but they will do. Hook 2 if you are running this game on a calculator. Both of them can be found on modsgarden, and the installation instructions are actually the same as Get Hook 4Download of the current work build from this post: msg-103050Download hook4\_test9e.zip from the bottom of the post. Check out files as you see them in the folder of the Dia files where you installed your game.... 3B. Start and check the hook (this step is important, read it) Start the game from the Binaries folder, TK17\_Launcher file. Running the game from any other location can run a vanilla game (bypassing the hook) instead or cause an accident. After the launcher popped up hit Options and MAKE SURE you CHANGE OPTION MARKED 'RENDERER TYPE' to 'DIRECTX'. Again, make sure the render is set up on DirectX. After that you can change the size of the resolution and if you want a full screen or turn off. Once completed in the options bar, make sure you press the SAVE button at the bottom. It won't look like he's doing anything but he does. Once completed, click on the free game (a couple of boobs) and for GOD SAK NOT FUCK with PASSWORD FIELDS, just click the START down at the bottom to run the game. If the game falls at the start, you need to choose another main hook. If the game starts, then go to the settings room and look at the textures. Click F9 to switch the FX file (your option) on and off. If you get static or there was no graphic change or that the change was marginal, then your hook works, but you need to choose another FX file. Apart from what has been mentioned here and in the troubleshooting section there is actually no rhyme or reason for the hook or FX file failing. We can only attribute it to your video card....3C. Choose your poison. There's a lot of hook files made by others with much more skill than you. You can play around with settings by editing your main.fx files with a notepad, or you can download finished files from this theme: needless to say, that you will have to delete/rewrite the hook3 files before checking the hook 4 and so on (4 in the future 5, etc.).....

memory and quickly leaves, and you want to make it stop, or you just want to make all loads faster, use the 4GB patch located here: msg53019Run.exe and patch both launcher and TK17.exe that are located in the binaries folder. This will allow the game to use 4GBs of RAM instead of myself 2.....MOD MANAGEMENT:.....A) Download JSGME Mod Manager (Generic Mod Enabler) SHOULD I BOTHER? Manual fashion installation requires keeping the mod at the appropriate destination in the TheKlub17 folder, which can troublesome considering the different fashions (.txt files, clothing, body mods and so on) go to different catalogs. Aside from that, if you want to check the differences between the two mods, allowing one mod and disabling the other more or less comes down to a large amount of copying paste and deleting numerous tiny files. The entire process of adding, activating, and deactivating mods can be fixed with this widely used mod manager. This program, when placed in the folder TheKlub17, allows you to store all the fashion folders in one place and makes it easy to turn on or off any combination of mods. OKAY, YOU SOLD ME ON IT, WHAT NOW?1. Remove the JSGME mod manager directly to the TheKlub17 folder. You don't need to put its contents in your own folder. Launch JSGME.exe. This will allow you to create a folder called MODS in the same place.3 Recommended before you delve into the modding you apply any scripts or patches to clean installation TK17. Open JSGME, click The Task and Create a snapshot of the game files. This feature will create a starting point in case you ever need to find out if a particular file is a mod or a main file.4 Remove the mod that interests you, along with the folder containing it, and move it to the MODS folder created earlier.5 In JSGME you'll see it in the list of available mods on the left. You can activate it by clicking on it and then arrow ". Similarly, you can disable the included mods by clicking on the mod on the right and then the arrow ". Many fashions are organized in such a way that they can be years to use with JSGME. You can, however, have to include mod scripts that complement different fashions and make them use with it. For example, R9 Mods require R9 Custom Addon and NoClip mods. They are used in the same way.....TX Files? When people say archive folders they mean inside folder 2.114.001. WHERE TO PUT SKINS, OUTFITS, ETC.? CommunityToyEditWHERE I PUT POSES? In the Maude/Activemod folder. If it's clothing, don't hesitate to name a file folder within everything you like. If it is a room, you should have R\_ in front of the name. (former: R\_OrckinThrone room) PEOPLE TO THE MODEL HOW DO YOU DO THE SAME? Your models are in the folder /Save/Models. They are all named ModelXXXX (where XXXX is their number). To know which model you want to share you just need to open pick a screen in the game and choose a model. The clone number is mentioned directly under her name (for example, it can say: Jill clone - 1342. This means that you are looking for Model1342) in the details of the screen. Explore the folder, \_r before the model then download that goodness to ftp. And modsgarden since without the bulk of their we wouldn't even be able to have it that way. Way. MY CLIENT HAS A SHEEP'S HORSE ALL THE TIME! / MY GAME KEEP CRASHING WHEN USE 4x / I CAN'T USE DIRECT X! then open CFF Explorer.Go to File and Open then go to the Binaries folder. Click on the launcher and then look at the left menu and click on the Header.Check box file, which says: The app can handle the 2gb space address!Click Save.Repeat above steps for EXE. And always open your game through Launcher in the dia file folder or your efforts will be flat. It will solve memory problems forever. If you ever make a new overwork you should make these steps more. HOW TO ADD TEXTURE SIESION (FOR 4X USERS)Open the file in Photoshop (or any other program Photo Shop esque you like)image - image size - x00% (x can be 2 or 4 depending on texture size)/Hands/Legs - 1024x1024Facex2 0484GB PATCH: msg1198Install and run.exe and use it on launcher and \_exe. I CANCELED THE ASSHOLE AND PUSSEY TEXTURE! Just take the texture of the female genitalia and - copy - and rename it Shemale\_ white. Save and replace the old version. HOW DO I SET THE HOOK? Remove the stunner files with a hook in the bilar folder; replace the main.fx file with the file you want to test from the app (rename main.fx). MY HOOK DOESN'T WORK. Install/update DirectX End-User Runtime/Se Renderizer Type to DirectX in Options (not OpenGL)Experiment with different resolution settings (Windowed Mode) Remove all mods and/or previously installed graphic enhancements (use a clean installation, Update driver graphics (AMD adapters may require 13.3 beta2 drivers; 13.4 Drivers appear to be working)Delete or reset any 3D acceleration profiles (they must be installed under program control)De-activate any GPU of desktop managers (e.g. ATI Tray Tools, nVidia nView, etc.) Unplug SNAO/FXAA in main.fx by commenting on #define USE\_SSAO lines and #define USE\_FXAA\_FILTERReplace your main.fx with those in this file: try these two various hooks. ENB+%2B+Skyrim+Shader.rarAnd be sure to install a launcher from OpenGL to DirectX in the settings! If this shit doesn't work, your video card is not maintained.....SOURCE: SOURCE:::SOURCE:::SOURCE:::SOURCE:::SOURCE:::SOURCE:::SOURCE:::SOURCE:::SOURCE:::WHERE:SOURCE:::I.Y. Never ask for anything like this on modsgarden. Make your own or find a forum, allows it. Even placing them in /rk17/ general is a touchy issue, the thread is removed when an excessive amount of lol! gets posted; subject treats that fine line between lol! and CP because of the great detail this game can pretty normalfag and they will jump into a frenzy if you offer lol!shots mods or clothes or the like. Despite the modsgarden being obscene, they are pretty vanilla/normalfag and break into disputes over fetishes ranging from fluffy to toe. That's weird. Go to modsgarden for mods, stay in /vg/t/d /generals for discussion. Discussion.
