[^2]: These names are used interchangeably, with the exception of, which has two main variants. Q: Is it possible to sort columns by numbers with group by? I have a table called 'list' Column name | Type ----- id | int(10) name | text age | int(3) score | int(5) Now I want to sort rows in ascending order of id (ordered by id) and keep other columns same. For example: id | name | age | score ----- 01 | Ravi | 6 | 9 02 | Kumar | 8 | 5 03 | Simon | 5 | 6 04 | Rahul | 9 | 8 05 | Robin | 3 | 4 I want sort in order by id and kept other columns same Final output should be like this 01 | Ravi 520fdb1ae7
