Records can be stored on an external storage drive, such as an SD card. In addition, iCSee offers the ability to view a real-time camera image through an Android device. Using iCSee on your PC to run Android software on the Windows or Mac operating system, you should download the emulator. This, as the name suggests, emulates the environment in which the app must work in its native language. The most popular software emulator for Windows and Mac is BlueStacks. We will focus mainly on installing this software on the Windows operating system. Installing the emulator Visit the official emulator page, on this page click download and the site will give you the correct version of the program for your computer. Using BlueStacks for the first time the download is complete, double tap the installation file downloaded from BlueStacks to open the program. You may have the ability to log in or create an avatar user identity for you. You can do this if you want, or you can skip this option at the moment. When the homepage opens, go to the menu item in the top left corner: My apps. Access to Android apps in BlueStacks In the Menu My apps you will be asked to use Google ID for all over. This is a mandatory step that will allow you to download apps from the Google Play store. Upon entering, you will have several menu options, including the option of not getting Google about product updates. You may want to consider leaving them. Once successful logged in, you're ready to start downloading apps. Downloading the iCSee app next to the My Apps menu button is the App Center menu button. Click this button to open the available apps. There you can see all the apps available for download and use through the BlueStacks program. In the upper right corner is the search box. ICSee in this box. The results can show many apps whose name contains iCSee text. Be sure to find the right app and click on it. You'll be able to install it. By installing iCSee How to install on an Android device, the program will encourage the app to have permission to perform functions on your computer. Accept these conditions, and the iCSee app will complete the installation. Finally, open and run iCSee Now you downloaded the iCSee app. Go to the bluestacks homepage and you'll find the opportunity to open the iCSee app there. That's it, now you've installed the software and you can start using it. Our website is made possible by displaying online advertising for our visitors.
