How to apply vinyl decal to cup

The latest trend is custom vinyl graphics decorating drinkware; application of vinyl to mugs, glasses and glasses. Etsy, Printrest, and related websites have many examples of cute custom mugs and glasses for sale. So of course we get many questions inspired and entrepreneurial customers about the new trend. What vinyl works best? What cups and glasses are suitable? Is the graphical dishwasher-free used? Can I use the Vinyl Cutter or heat depresser? Read on for answers to all drinkware decoration questions. Vinyl recommendations is the easiest way to decorate mugs and glasses with a vinyl cutter and some standard, self-adhesive mark vinyl. Of course mark vinyl so it was called because it is designed to apply banners and sign blank, non-ceramic mugs. So this is a non-standard application. When it comes to this type of non-industrial application, we consult with manufacturers. Dean Strohmenger, senior product support expert at ORACAL, says ORACAL is aware of the trend, but because of heat and cleaning products, it doesn't justify vinyl for this application. Dean advises... The most successful applications include both plain glassware and cast vinyl (751 or 951). 651 also works as it is also a solvent-based adhesive and much more economical, but conversely it is less appropriate, so there is more size limitation when applied to a cylindrical substrate than a drinking glass. Plastic cups, to a lesser extent depending on the quality of the plastic, can also be successful, but limited to smooth surfaces. The reference to plastic cups is added because not all plastics are vinyl-friendly. Low-energy plastics like polystyrene and polyethylene are static charges that repel the adhesives used in vinyl film, which makes use of curling and possible failure of the sticker. Make sure you do not properly test before committing to putting vinyl graphics on plastic cups. If you are using mugs, glassware, or a vinyl-friendly plastic, the main consideration is the longevity of graphics like drinkware cleaned. If the finished product will be tossed into a dishwasher, Dean recommends that the applied graphic should be allowed to heal at least 24 hours before washing, giving the glue sufficient time to make a permanent bandage on the drinking pot. During our testing, EnduraGLOSS vinyl, ORACAL 651 and 751 all worked well on ceramic mugs. But there were differences in the degree of success depending on the application technique. Application Tips Given with the aforementioned warnings, it is wise to note that this can be a challenging application. Designing a graphic for a fashionable, filligreed font is not a good idea. Use relatively simple shapes; the bolder the font, the better the knitting. The better the bandage, the more wash it will be. Figure 1: vertical hinge is the quickest way to apply vinyl and ensure that it is level with a mug or cup. • Apply dry or wet? When applying vinyl to any substrate, be sure to place it straight. When decorating a banner that's going to hang across the street, you might get away with having it if you're just a guy off level. But when the app is literally under the nose of the client, it should be straight. So applying dry without any way to measure or set is a bit risky. In order to make the doggone safe at the graphical level top & bottom of the mug, you can apply it to a small application fluid, or use a tried and true hinge method. In our testing, we used both wet and dry methods to apply vinyl ceramic mugs. Oracal 751 graphics were used with RapidTac. Since it has a permanent solvent adhesive, it should have handled the wet application well. But it is difficult to get all the liquid out from under the vinyl on such a severely curved surface, so it took a while for the adhesive to bond. In fact, the tape had to be left on overnight. When I finished removing it 14 hours later, one of the letters was still not fully set. This elassic healing time of the adhesive can make the applied graphics more likely not to be in the dishwasher. So wet application is not the best method for these items. The EnduraGLOSS and ORACAL 651 graphics were applied dry with vertical hinges (Fig. 1) with the blue painter's ribbon of the Main Ribbon. This allowed me to remove the tape applied almost immediately, and it gave the applied vinyl a lot of time to set up before washing testing. • Dishwasher settings. If possible, advise the customer to avoid high temperature washing and high temperature flushing. The extra heat added to high water pressure and detergents can shorten the life of the application. Testing was done with these two turned off and hero locking turned on. The two graphics that were applied dry came out fine. One that had been applied wet was a very small amount of edge lift to the smaller graphic elements, but the rest of the sticker stuck to it. Please note that vinyl manufacturers do not undertake to re-exposure of these products to the heat and water pressure of the dishwasher. Finally, the graphics start to come off when it's cleaned so many times. It would be wise to tell your clients to wash it by hand. Many travel mugs are not dishwasher washable, so this should not be a significant barrier to sales or customer satisfaction. Alternatives If you need something more durable or want to decorate mugs with finely detailed images, you may want to consider dye sublimation or laser transfers. Sublimation is a durable tried and true method of decorating mugs. this is a method of heat transfer, a mug of presses or mugs should be packed. You will need a dedicated inkjet inkjet sublimation ink and the appropriate transfer paper. The total dye sublimation startup package, including a heat press, can be purchased for less than \$1,000.00. Just as vinyl won't stick to all kinds of plastic, there are substrate restrictions on plank sublimation. Candidates for the sublimation test shall be coated in polymer by train. You won't find these mugs in Potter's Barn, so the cost may be a little higher. Laser transmission is similar to sublimation, but with a small difference. There is still a need for a heat press and some types of transfer paper, but standard mugs and glass jars can be used; polymer coating is not required. Both techniques give you several design options, including gradient color fills and photographic images, and eliminates the need to weed. But if you have a cutter and want to jump on the decorated drinkware bandwagon, you are on it. EnduraGLOSS, ORACAL 651 or 751 will work well. Just keep the design simple and apply dry. Be careful of cheap plastic cups and make sure the customer knows the vinyl appliqué is not fully justified for dishwasher use. If it's hand-washed, it takes a long time. But if it comes down in the dishwasher, they just have to buy another one. Maybe you could sell them in pairs: one for regular use, one for the trinket shelf. WWW.SignWarehouse.com this post may contain affiliate links for your convenience. If you make a purchase through one of my links I will seek a small assignment at no additional cost to you. Hey, cunning friends. Today you will learn an easy way to make vinyl in your glasses. Applying vinyl to tumblers is straight enough forward to make it a perfect Cricut craft for beginners. In the video below, you will see that placing vinyl on curved surfaces is not so bad. Plus you can find out the answers to all the questions like what sealer use and vinyl tumblers go dishwasher? I like the different types of adhesive vinyl that is available today, you can customize your glasses even more. I'll make a simple initial for this tutorial, but this method will work for any vinyl sticker you want to add. It will also work on mugs and glasses too. Let's start with the application of vinyl to tumblers with a tumbler -Here's the direct link at the one I used ✓ Vinyl - Love the Buffalo Plaid Vinyl found here ✓ Transfer Tape ✓ Weeding Tools ✓ Cutting Machine Like a Cricut ✓ Tape Measure ✓ * Optional Alcohol and Cotton Balls Another supply that you'll see me use in the video is a tumbler holder. You can definitely apply vinyl without it, but if you end up with that a lot of latches it will be worth it to have the glass owner here. Bonus -they are cheap and easy to make! Apply Vinyl tumblers video to get you started you'll You need to measure the glass so you know how big it is to have a vinyl sticker. My tumbler measured about 3.5 before the curve so I'm going to put my sticker 3 high. Cutting the Vinyl I chose Ariel Black as my font because it is beautiful and chunky with these one-letter stickers. To make the scaling just right go to the top menu Cricut Design Space. Where it says size type 3.0 next to the height size and press Enter. (or any size defined by the sticker can be) This will automatically adjust the width for you as well. To do this, each vinyl sticker you're going to make, then press the make it button. Need more help with Cricut? Get the step by step guide + tips to all the things you can do in the design space. Plus you get a lot more, check out the Ultimate Cricut Guide here. Next place is vinyl for green or blue cut mat. Line up in the upper left corner and set the dial to vinyl or choose vinyl for the list of materials. Then load the mat and press the start button when prompted. Once the vinyl is cut, press the unload mat button to release the mat. Turn the mat over and remove the mat from vinyl to help prevent vinyl curling. Weeding the Vinyl The weed is vinyl, use the weeding tool to help pull up the corner of vinyl and remove excess vinyl from the design. Repeat the process of each inner piece to be removed until only the design remains. Application of the transmission tape The easiest way to get the vinyl onto anything is through tape. It keeps the design together and even with just one letter stickers, you can hold the vinyl by stretching and bending the leaf. I only have a regular clear contact paper that you can get in places like Walmart. I think it's the perfect amount of sticky. Unless, of course, you are working on sparkling vinyl, you will need a strong grip over tape. The easiest method I've found is to peel off the back cover and fold it back to one edge of the transmission tape. Stick it to the end of the edge of the vinyl sticker. Then remove the back cover with one hand when smoothing the tape with the other hand. If you do it like this, it'll prevent the transfer tape from becoming a big sticky mess. Clean the Tumbler Ok, the sticker is ready, now you need a clean place to stick. You can wash the surface with soap and water, or grab some alcohol and cotton balls to clean the surface very fast. Apply vinyl smaller stickers like this, remove the whole support of vinyl and line up the glass. Since it's a smaller size, it's pretty easy to work with, just make sure that the sticky parts don't affect each other. Place your fingers in the middle of the sticker and place them on the glass. If the sticker taught, only the Contact. Don't press down yet, just look at it to make sure it's straight. In the video above, you can see me move the sticker once or twice while I was happy. This makes it easy to pick up and move again until you let the middle touch not press down. After you're satisfied with the position, press the middle. Then go from the middle and smooth down one side and push hard as you go. Once this page is down, return to the center and smooth it down to the other side. Continue to rub firmly over the sticker, especially around the edges. You can use the scraping tool as well if you want. Once the vinyl is all stuck it's time to remove the transfer tape. Start in one corner and pull off the transfer tape. It's better to push down the transfer tape and pull the shell down than pull it straight up. If any part of the vinyl sticker tries to come up with the transfer tape, just lay the tape again and rub it very hard over and try again. And it's as simple as that. And I suggest starting with something simple like a lettermarica, and once that goes well, you know, everything you need to know and the sky is the limit. Be sure to keep scrolling- I cover some frequently asked questions below, such as washing instructions and sealers. What Vinyl is used for tumblers put vinyl in the glasses you're going to want to make sure you use a permanent adhesive vinyl. If you try this interchangeable vinyl, it will fall off pretty quickly. There are several different types of permanent adhesive for vinyl including a line, glitter, gloss, matte, and so on. Any of them can be applied to a glass or mug, but remember, none of them can be washed in a dishwasher. True.... I put mine on the top rack of the dishwasher and they are ok, but the results may vary. No Vinyl Stay on Mugs and Tumblers Yes- vinyl stays in mugs and glasses, provided you use permanent glue vinyl. I haven't had vinyl coming off a mug or cup yet, but guarantee longer-term results, be sure to hand wash it only. How seal vinyl for tumblers I don't lock the vinyl in the glasses. Most vinyl manufacturers actually recommend not to apply the sealant over the vinyl. The exception would be if you want to go through the process of sealing the glass with epoxy. This is usually done in glitter glasses. _____ Thanks for crafting me today! Now you have the knowledge to apply vinyl to glasses and other curved surfaces. Plus, you've learned how to care for your glass to get long-term use. Enjoy! Chris Butler has helped thousands of crafters learn how to use a Cricut machine without feeling overwhelmed. He's a bestselling author and an up-and-coming designer. For fun Chris enjoys designing Files, hanging out with his family (preferably by the lake), traveling, and volunteering at the church. She is a wife and mother of two crazy fun kids. Kids.
