The Utah City SoftRIP is a powerful yet easy-to-use raster image and print management and preparation software. With its ease of use and powerful features, it has become the software of choice for millions of users worldwide. Utah City SoftRIP is ideal for anyone that uses a Web Site to present information or marketing materials. It can be used by a wide range of users, from the casual Web designer to the professional graphic artist. Utah City SoftRIP is designed to easily prepare raster images for display on a Web Site, digital camera, scanner or printer. Utah City SoftRIP includes an editable, user-customizable Raster Document Properties window, as well as a powerful drawing and editing module. Features of Utah City SoftRIP Include: - Tool for modifying and adding complex layer masks.- The ability to add layer effects, colors, blending modes, and layer styles.- The ability to create, rotate, move and scale images and objects in layers.- The ability to generate image key frames, export transparent GIF, BMP and JPEG images.- The ability to remove objects, objects, layers, or entire images.- The ability to convert images to a wide range of formats, including PDF, GIF, PNG, TIFF, EPS, JPG and BMP.- The ability to add text and

images to JPEG and PNG images.- The ability to rotate and scale PNG images.- The ability to print a variety of common file formats.- The ability to perform advanced tasks such as saving Raster Documents, moving objects and groups of objects around, and adding copyright and watermarks. What's New Version 2.0 - SoftRIP now supports Zip files.- Raster editing has been enhanced to make them much easier to edit.- A new command line has been added.- The draw toolbar has been removed and replaced by a menu bar.- Raster Document properties window now appears before drawing- A new drawing toolbar is added to the draw module.- The color picker now displays alpha channel information.- A new example source code has been included.Cationic porphyrins can be used as ionophores in cation-exchange ion-selective electrodes. Cationic porphyrins are shown to form stable complexes with many alkali-metal ions. These complexes are capable of forming solid-contact ion-selective electrodes based on a cationic porphyrin. The complexes are formed at the interface between the ionophore and the
