The transition from middle school to high school marks a rather exciting time in the life of the child and his parent. But it can be scary, too. It's not just moving to another school - it's a whole new environment. Starting high school can be overwhelming and confusing, and not just because the buildings are physically larger and the campus is unfamiliar. Children leaving middle school bubble in the jungle of high school not only have to deal with new teachers and academic requirements, but also a completely different set of students, some of whom are three years older and much more mature. Going to school can be disastrous if a child doesn't make the transition smoothly - more children aren't ninth grade than any other class source: Weber. Most school systems lead the way by implementing transitional programs that can include everything from visiting campus to shadow students, but this is never easy. Our list of the top 10 differences between middle school and high school will help you identify some of the pitfalls you may encounter when your child enters ninth grade - like what happens when your trombone-playing math whiz learns that a group practices conflicts with calculus? We hope you will find some tips that will help you through this often crazy time. Advertising Content One of the scariest things about moving from middle school to high school is often a dramatic increase in school size. It is difficult enough to move from a three-year school to a four-year school and then, on top of that, several high schools from the same district are often dumped into one secondary school. Thus, in high school there can be four times as many children, most of whom will be absolute strangers. As the first day of ninth grade looms, it can be overwhelming to imagine entering a completely unfamiliar (and much larger) campus and walking into a sea of new faces. Most high schools are quite attentive about mitigating the transition, but it's not hard to see how kids can get lost in shuffling. The larger student body leads to the next item on our list... Advertising We know that high schools have higher enrollments than middle schools, so this is the reason that individual classes are going to get bigger, too. The ratio of students to teachers varies greatly across the country, but overall high school classes are larger than middle school classes. It may not be much, but it does matter. The jump from a 15-student class to one with 20 kids doesn't seem like a huge deal, but it does lead to things feeling a little more impersonal and less one-on-one interacting with the teacher. In high school, of course, there are far fewer arms - older children need to be more responsible and independent, so they (theoretically) do not need attention from teachers. And a child who is not quite ready for The challenge may end up falling through the cracks. Advertising eighth grade teachers seem to be spending an excessive amount of time trying to make it clear to their students (or trying to scare their students, however you want to look at it) that there will be a lot more homework in high school. And they do it for a reason: high school has a lot more homework. Children who are not ready for this may be in a nasty shock during the first month or so of ninth grade. Increased workload - combined with the stress of new environments, schedules, expectations, teachers and classmates - can really throw some kids on a loop, so it's especially important for parents to be on their game during this transitional time. Eighth grade advertising - especially the last couple of months - is a dizzying time for some kids. They are the oldest (and therefore the coolest) in school, and they take every opportunity to lord this fact over who they believe is beneath them (it's like, you know, everything). But when September rolls, they discover quite quickly how demoralized it can be to fall from the head of the package to the bottom of the trunk. For these and other reasons that we have just discussed, many children find themselves floundering in ninth grade. Some schools have tried to combat this phenomenon by separating freshmen from the crowd just a little bit - they institute ninth-grade academies or smaller class sizes to maintain some of that high school feeling for a while longer. Advertise In most high schools, with their emphasis on community building and educating students, children don't get much choice in what classes they take. Students can be placed in different groups depending on the level of qualification, but in general, there are small

differences in courses. Sixth grade is American history, seventh grade is down to algebra, that's all. High school is a brand new ball game, with seemingly endless choices - which is interesting, obviously, but it can be overwhelming. And planning is always difficult, too: What happens if your trombone plays a child also math whistling, and advanced trigonometry at the same time as group practice? Or if the physics conflicts with the French? There may not be a simple answer or a quick fix, but if parents, teachers and counselors work together, they can create a balanced schedule. Advertising you might think that as academic and athletic requirements increase in high school, so can the involvement of parents. After all, this is a critical moment in your child's life - pretty soon, they fly a chicken coop, never seen. But you'd think wrong. Parental involvement actually decreases during school years. One reason is that secondary schools often don't court parental involvement as much as primary High school do - it's just more hands-off type environment. Parents also often assume that their contribution is not as much as because the children are older and more responsible. Not really. Many studies have shown that parental participation is a major factor in their children's success. So go and volunteer - your kids may be embarrassed to get you around, but it's for their own good. Advertising People often refer to high school as a bubble - students do their reading, writing and arithmetic, of course, but sometimes this process is emphasized more than the end result. Children learn about themselves safely in their own small community, and there is little attention to the outside world. But that all changes in high school. Suddenly the goal is very clear: college. No more fooling around - it's the real deal. Some students, to be sure, are focused on the class from day one, so this change in goals can be exhilarating - finally, all those like to count on something! However, it can be a concussion for a child who may not be all about classes. So again, it's up to you parents - it's your job to remind underperformers to step up to the plate. Advertising Poor 9th graders. As if they no longer have enough to manage that with an overwhelming new environment, a larger class size and increased academic requirements, they also need to juggle a few new teachers. In high school, kids probably don't have more than two or three different teachers a day, but high school (as it does with everything) kicks that down to a few notches. Now they can have six or seven teachers every day - all with their own methods, standards, loads, moods and features. It's really not surprising that classes are falling and dropout rates soar in ninth grade. So even if you stay on top of your child's work and evaluation, be sure to be understanding - it can be a difficult time. Once they hit the 10th and 11th grades though, you can really crack the whip. Advertising Most of the changes that we've discussed so far in this article have some duality attached to them - the transition to high school is exciting and scary. But sport is one part of high school life that can be parked right in an exciting place. Most high schools have sports teams, but they do not bring school to life as high school sports can. It's just like a switch in focus with academics: Sure, high school sports are fun, but a high school football game is the real deal. Even if your child is not an athlete, sporting events offer many opportunities for social interaction with new classmates. Also, the taste of the school spirit never hurts - it gives children the beginning of a new identity that can make the transition a little less painful. Advertising you knew we were going to get to this sooner or later, didn't you? Peer pressure its ugly head is pretty early in any child's life, but the stakes are definitely raised in high school. Pressure to drink and take drugs certainly appears for in high school years, but children (and parents) soon realize that these problems are small potatoes compared to what is lurking in high school. And it's not just about banned substances - it's clothes, food, deception, you name it. Succumbing to peer pressure can quickly derail an academic career, and this is a major factor in many dropout cases. As always, parents should be vigilant and, most importantly, keep the lines of communication open.
