

UX Standardization

Entando is the leading micro frontend platform for building enterprise web application on Kubernetes.

Entando Professional Services provides guidance and expertise on how to align the Entando User Interface with your specific business needs. Our process driven design approach to applications focuses on taking any business process and streamlining it for your users.

We do this by analyzing your current applications and UIs and aligning them with our UX engineering or development driven UX methodology. UX engineering is the balance of design and development and focuses on harmony between your design system and our UI capabilities.

What will you get?

- A UX Findings and Recommendations Report that will highlight all of the UX opportunities for standardization to help meet your project goals
- An idea of how you can best leverage the Entando Design System either on it's own or in parallel to your existing design system
- Direction on how the Entando UI and process driven design solutions help position your project or applications for success

Benefits

- Reusable or modular UI assets - component libraries and design systems
- Consistency across all your application(s) in look and feel and interactions
- Faster feature and functionality to market by applying those reusable assets
- Scalability across different types of systems and applications as your business grows and changes
- Built in UX best practices with a modern themable UI

Get Your Design System

At Entando, we understand the importance of aligning the user experience requirements with your specific business needs. This package is designed to allow your team to create a standardization path to create a collection of reusable Entando components that can accelerate the development of projects on your company. These components (widgets, micro frontends, microservices, UI templates) can be assembled starting from your internal component repository to build any number of web applications. The result will be a growth of the productivity of your team allowing faster delivering of your Entando based solution.

Reusability of components requires a standardization path for UX/UI

When designing, building and delivering application on top of kubernetes your team need a standard way to scale, increase efficiency, and get consistency.

Imagine that your company has many applications and needs to modernize many of them and build new ones. It's likely that the many teams working on different parts of the same project or on different projects will create inconsistencies over time rebuilding similar components (micro frontends as sample). Imagine now to have a set of principles, rules and out of the box reusable components shared on your internal component repository. It becomes much easier to create consistent experiences across your applications and a faster way to build new products at scale.

Entando UX Standardization Program helps enterprises gain the benefits of a custom design system with reusable components that reduce the complexity to build apps with a shorter time. We provide a standard approach on how to develop apps as reusable micro frontends and microservices, evolving your internal component repository.

About Entando Professional Services

Entando Professional Services team works with Customers to enable success in their digital journey. A global team with extensive experience on a variety of industry sectors, such as telecommunications, e-commerce, travel, digital entertainment [CHANGE OR ADD MORE], Entando Professional Services team guides the your Customer through critical milestones and decision points, augmenting the your Customer team and providing support or ownership of governance, architecture, infrastructure, delivery, training.
