BaByliss hair styling tools have a long history and tons of fans. Beauty brands of hair dryers and curling irons get consistently high marks from users and our selections for the best BaByliss flat irons are just as fantastic. Figuring out which BaByliss hair straightening tool is the best option for you depends primarily on your hair type and what type of plate material fits your needs. There are two types of heating technologies you will see with most flat irons: Ceramic plates: Using a tool with ceramic plates is the best way to protect fine or easy to straighten hair from unnecessary heat damage. Ceramic plates use infrared heat that works from the inside out and is finer on the strands. Ceramic plates also evenly distribute heat so you don't have to work sections over and over again. Titanium plates: Titanium plates work better for hair, which is usually difficult to style (think thick, curly, or curly). The metal is a highly efficient thermal conductor, so it heats faster and smooth plates to create tons of shine. Titanium is also resistant and corrosion resistant to styling products that can build up and leave the rest. Although the material boards is the most important consideration, some flat irons use a combination of both of these technologies. For example, flat iron with titanium plates and a ceramic heater will create strong, but also warmth. Another factor to consider is the size of your flat iron board: 1-inch irons are easier to maneuver, especially closer to the scalp and when straightening wounds. Flat irons with 2-inch plates can style large parts of your hair quickly, so they may be the best choice if you have long hair. Regardless of hair type, though, a good heat-styling tip is to always use thermal protection like this HSI spray with argan oil. It not only protects your hair from heat damage, but acts as a leave-in conditioner as well. Read on to find the best BaByliss flat iron for your needs.1The overall best BaByliss flat ironS over 3100 reviews, this hair straightening iron is a popular choice for people with all kinds of hair needs and hair types. The styling tool has 50 heat settings with a maximum temperature of 450 degrees. This makes it an excellent choice for brittle hair that needs lower temperatures and for more durable locks such as thick curls that need more heat to achieve the same results. This professional hair straightening is unique in that it combines a ceramic heater – which helps it warm up in a flash – with titanium plates that smooth out even the most disciplined flyaways. These thin, 1-inch plates also give you more control as you work this tool through your strands, springs, around the scalp, where it can often be difficult to get close enough to make an impact. This size is ideal for short and medium lengths, as well as for wounds. If you have long hair and lack of time, though, the same styler with 2-inch plates can get the job done even faster. Fans say: When I worked in the salon as a hairdresser I applied almost every day to clients and had great results every time. It glistens your hair, and it takes seconds to warm up, what else heat the whole part of being straightened/curled saves time and your hair from excessive heat damage. It's a product/brand I believe inside and outside the salon. 2The Best Hair Straightening for Long HairBaBylissPRO Porcelain Ceramic Leveling IronWhat makes this BaByliss flat iron a good choice for longer lengths is 4-inch long and 2-inch wide plates that can straighten larger parts of hair faster. Although the width is similar to our overall best pick up above, this iron is a ceramic heater that uses infrared heat, it is instead designed with porcelain plates to help distribute heat more evenly as you work through your strands. Even heat means you won't have to go through the same section repeatedly, making this styler a safer bet on long hair, which is also fine. Plus, this tool is also a few ounces lighter than our first choice, which means it will be less of a chore on your hands. The temperature range ranges from 235 to 450 degrees. Fans say: This is an amazing product. I ordered one for a family member a year ago and after hearing how much he still loves it, I decided to order one for myself. I have long, thick and curly Hispanic hair and this flat iron straightens my hair amazingly well. I can get it super straight into one pass... Two max if my hair is particularly unruly, but even then, I am able to straighten my full head in 25 minutes and it says perfect for days. We strongly recommend that you do this. 3The Best Budget-Friendly Flat Iron BaBylissPRO Ceramix Xtreme Leveling IronAmazonCurrencies of this flat iron emit far-infrared heat that protects strands, heats them evenly from the inside out (thus eliminating harmful hot spots), and is generally finer. It has 25 temperature settings, with the highest at 450 degrees - being able to set the heat to the right level is key when it comes to managing damaged and/or fine, fine hair. This iron is also very wallet-friendly and has double the voltage so you can take it with your almost anywhere in the world. Fans say: I love my flat iron! It heats up quickly, works perfectly, and never catches and pulls or breaks my hair like [the other] one I've had. It has a nice long cord that rotates. It's really a beautiful flat iron. I also have a matching hairdryer and I like it as well. I'd buy them again if anything happened to them. Most Portable & Compact Flat Iron For TravelBaBylissPRO Nano 4The Most Portable & Compact Flat Iron For TravelBaBylissPRO Nano 4The Most Portable & Compact Flat Iron For TravelBaBylissPRO Nano 4 4 Mini Leveling IronAmazonDual Voltage Nano Mini will work almost anywhere you travel to without you needing an eye around the converter. Although it's small, at just 6 inches long, it still heats up to 430 degrees and has hair-smoothing, titanium-coated ceramic plates that are 1 inch wide. Flat iron is super light at just 4.8 ounces, making it easy to pack in a suitcase or bag. Fans say: I bought it on a trip to Europe, and I'm so happy to have it! This is a great little iron - it heats up quickly, and works very well. It is very small and light, easy to transport, and it was great that the voltage passed automatically. I used it in both the States and Europe and it worked perfectly in both places. I highly recommend! 5A 2-in-1 hair tool that does more than just straighten – It can add curls or waves, TooBaBylissPRO Nano Titanium StylerAmazonThis BaBylissPRO flat iron has titanium plates to smooth out and straighten hair and other heated side plates that make it versatile enough to add wool or curls, too. The hot tool also has rubberized thumb drying, plus a cool tip and handle, making the whole process safer. There are only three heat settings that range from 340 to 450 degrees, so it may not be the right choice for break-prone hair that needs lower temperatures. But if you use this tool as an additional styling device, it will still save you time and money. Fans say: This flat iron is fabulous. It heats up immediately and put my hair just into one or such curve that I don't use curling irons. I'm African-American with natural hair and my hair will be as straight as I want.
