

HOW TO INSTALL HANDRAIL:

Place handrail over platform as shown. Push handrail flush with side of platform, and the bottom of the handrail will fit over the bottom of the platform truss. Screw handrail into the top of the platform using drywall screws. To connect (2) sections of handrail together, it is necessary to use a splicer and put it between the top rails of 2 sections of handrail BEFORE you screw the handrails into the platform tops. Corner splicers are required when joining two sections of handrail in the corners of a deck.
