AOMEI PXE Boot v1.5 Final ( Portable)

**DOWNLOAD:** <https://byltly.com/2ik3r8>

---

Â» Â» PxePxe Hmm, I'm going to try that now Seems to work with the usb-installer Ooh, super, another bug has been fixed. I'll try to report that. Ah, and another one, but this one is more annoying. If you install ubuntu server, but you don't configure an SSH server during install, you get the GUI login prompt when rebooting. I just did a 'dpkg-reconfigure console-setup' and it seems to have fixed that. But the ubuntu-bug command doesn't work :/ I'm getting a "Cannot report a bug, try to find a package or file a bug against an existing package instead." Since the ubuntu-bug command is reporting that the "invalid" file is in /usr/bin. ah, found it. Yes, I should have remembered that - I reported that bug some time ago. I forgot to close it. ^Mike: that's why I have 2 bugs lying around: I just can't remember which bug I put together oh. ^Mike: when you report bugs, could you also list the packages, versions and such you're using, and what architecture? of course, unless it's a server, you already did that, didn't you? !hwe The Ubuntu LTS enablement stacks provide newer kernel and X support for existing LTS releases, see !xenial Ubuntu 16.04 (Xenial Xerus) will be the 24th release of Ubuntu. Announcement: - Discussion and support in #ubuntu+1. Release date will be mid-April. I just did an apt-cache show 520fdb1ae7
