I only have a new laptop but it is loaded with hp programs. HP client security manager hp collaboration keyboard hp collaboration keyboard for cisco ucc hp connection optimizer hp device access manager hp eprint sw hp esu for microsoft windows 10 hp hotkey support hp jumpstart bridge hp mac address manager hp phonewise drivers hp softpaq download manager hp sure recover hp sure run hp system default settings hp universal driver hp hp hp hp workwise service I tried looking for answers but they do not include all programs. can anyone help? Thanks 0 Format and clean installation is what I always do. They spoil it up royally. I'm you I'll remove all the last people and probably everything else they have installed that is not windows other than reinstall format and is your best option. You will not format and install then just remove everything except the 0 Format drivers and clean installation is what I always do. They spoil it up royally. I'm you I'll remove all the last people and probably everything else they have installed that is not windows other than reinstall format and is your best option. You won't format and install then just remove everything except my Page 2 Disk drivers keep on shooting up to 100% in my management job. This happens when I log on to my computer and other random times (gaming, google chrome, etc.) I've looked down the list of running processes to find different processes that take up the majority of disk space each time. Sometimes it will even be Google Chrome. I don't know what processes to end up in my management job, or if I even have to do anything about that to find solutions. My specifications: Intel Core i5 GTX 1060 3GB Gigabyte Z97-HD3 Motherboard 8 Gigabyte Ballistix RAM 1600MHz 1TB Seagate hard drive LG optical drive CX750M Power supply One thing to consider is that my Windows 10 Pro has not been activated. If anyone has handled this help is much appreciated. I've googled many solutions and nothing has changed. Thank you for your feedback in advance! 0 Did your hard drive go full and go empty again? Or are you talking about HDD activities? 0 He uses hdd to smash space. Use Resource Monitoring to see what's using all up Page 3 for tutorials. i go to the App Store in Windows 10, and im trying to go to some Application page, in this case im trying to install Asphalt 9 Legends, so I go to the Asphalt 9 app page, but suddenly, the notification window appears in front of it, saying turn on your Windows Update / Update your Windows for a better performance like that, windows notifications block me from installing any application, I can not get rid of it no problem can I install any app in the App Store without updating my Windows 10? im trying to update it, but i cant cause it always says there's a problem updating your window or anything like that. i don't mind screwed a small window system as long as i can skip the App Store or it doesn't cause any major problems. Thank you in advance. Page 4 Thought there might be a few different things going on but I noticed all this when my computer did an update when I turned it on this morning. All of a sudden when I browse the internet, when I click on a link it loads forever finally tells me can not be achieved, this happened on many sites throughout the day. I will google something click on a link and it either takes forever, uploads all wrong or times out. Throughout the day I also ran speed tests, and of course ookla uploaded immediately and I pulled 150+ downloads each time. So that's my first problem. Then I hardwired my computer and noticed that my speed was always running half what I was getting on WiFi. Tried to killnetworking to download the new driver center and update the driver, but it will download it pretty fast and sit there at 100% and not finish. So I don't know what the hell is going on, but my computer is almost unusable all of a sudden, please help thanks. <edited out= profanity=> Hi, Jon: Definitely not as follows... HP Hotkey Support -- controls the function keys. HP 3D DriveGuard -- acceleration control (park the hard drive head in case the laptop accidentally collides or falls). You can also explore C:\drive, find and back up the SWSetup folder to a portable storage device, and then delete the folder. The SWSetup folder contains software installation files and drivers for the computer. The files in the folder are not required for the computer to function. You only need them to reinstall programs or drivers. You can also do it from support for notebooks. You'll probably gain at least 1 GB of drive space after deleting it. By user January 25, 2020 HP Support HP Jumpstart is an application or program installed with HP computers, laptops, <edited> </edited> and more. It's like the HP Solutions Framework was developed to help users. The software or program guides HP PC users through a welcoming process of many steps. This means there are many things that you can do with hp jumpstart. The welcoming process has different covers. It allows you to complete the HP registration process, registering for McAfee products prein installed in your HP device. Not only that, you can also activate HP Dropbox-related offers. There is also an HP JumpStart Special Assistance screen. This screen will give you tips and suggestions to help users personalize their computer and install the app of their choice. Initial HP JumpStart Startup You should not download HP Jumpstart if it already has a computer. You just need to launch it to start using it which steps are mentioned below: Open your HP device and click boot from the start menu. When the HP registration screen displays enter your details to start using it. You can click the Sign Up button or select Ignore. Now, the Dropbox screen will be visible. Sign up for it, if you want to access and share files anywhere. To sign up, click Create account or select Ignore. In a row, the McAfee screen opens. Here, you can sign up for McAfee security products. Sign up for McAfee by providing your email address or selecting Skip if you want. Then, the Apps screen displays that you can do the same. Moreover, the Concierge screen will display that allows you to see the status of the app settings. You can click on the next download option that's done. Here's how you can launch it on your Windows 10 PC. What is HP JumpStart Bridge? The program was developed by HP to help users add a background service that will run automatically. You can also choose not to start by customizing settings through the service manager. It also lets you schedule tasks by adding it to Windows Task Scheduler. What is HP JumpStart Apps? Should I get rid of them? With HP jumpstart, you can install different apps on your device. If these apps don't work for you, you should remove them. You can uninstall the HP JumpStart app by following the steps in the next section: From the Start menu, go to the dashboard. Navigate to the Programs section and select Add or Remove Programs. Locate the hp JumpStart Apps program entries. Click the same option and then click Uninstall. Follow the prompts given by the uninstaller. You will see a progress bar with time that will be done to uninstall it. You should use HP jumpstart to make the most of HP devices. Thank you for being a part of having CNET community. As of December 1, 12, the forums will switch to read-only formats. In early 2021, the CNET Forum will be no longer available. We are grateful for the participation and advice you have provided to each other over the years. Thanks. CNET Support Questions I just got a new HP PC, but it has a lot of HP-programs that come with it. And I wonder if I really need all of these? I have just used my computer for three weeks and the memory is almost full. The program I wondered about was: StarHP Audio Switch HP CoolSenseHP DocumentationHP ePrint SWHP JumpStart BridgeHP JumpStart AssistantHP Support Solutions frameworkHP Sure ConnectHP System Event UtilityDropbox (I never used it nor will I ever use it)BonjourVulkan Run Time LibrariesWeb Companion I don't know anything about computers, that's why I'm asking you! Report: HP program, which one I can uninstall this post has been flagged and will be reviewed by our staff. Thank you for helping us maintain CNET's amazing community. Sorry, there was a problem flagging this post. Please try again now or later. 4 articles - Crash + Expand details - Crash - Answer Bonjour is when we install iTunes so you can toss without iTunes. I want to leave the rest. - Crash - Answer those who have HP in the nameVulcan Runtime LibrariesBonjour (If you use iTunes) Energy Star.Web CompanionDO uninstal: Bonjour (If you do not use iTunes)Dropbox (You say you do not use it) - Crash - Answer Ok one thing you need to understand. Installation and uninstall does not affect memory usage. The disk space is affected and disk space and memory are 2 different things. The drive is used to store programs and use space to cache running programs that affect speed if space is limited. Memory is used when you load a program and what happens is that the hard drive is read and then the program uses internal memory. Most systems today come with 4gb, 8 gb or 16 gb of memory. Today, both hard drives and SSDs are used for storage. Typical SSD comes on todays system with 128,256,512 or 1 Tb storage while HD is usually 512. 1 tb or 2 tb. Another thing is that programs do not take up much space. Most times data such as multimedia files (video and audio) or images are files that take up more space. Go back to the PC app forum
