

Wealth Management Service Rules

Product Introduction

Investment Management is a cryptocurrency value-added product developed by GalaxyEX that allows users to deposit and withdraw anytime. Users can transfer their idle coins to Investment Management and enjoy daily returns from their investments. With instant deposits and withdrawals, interest accrues daily, and the minimum deposit requirement is 10,000 USDT. Investment Management is backed by GalaxyEX's strict risk management system, fully guaranteeing the security of user assets and ensuring peace of mind.

Product Rules

Investment Management assets will be used for GalaxyEX's high-frequency digital currency trading and mining operations. Investment Management only supports USDT storage on the GalaxyEX platform.

Transfer In/Out Rules

Users can transfer assets in and out at any time, with real-time deposits.

Users who transfer investment management assets and choose to transfer regularly will not accrue interest on the first day, but will begin accruing interest on the second day and will be credited to their account on the third day. Once interest is credited, it will be automatically transferred to the user's cryptocurrency account and begin accruing interest.

Interest Distribution Rules

High-frequency quantitative trading and mining revenue will be used to distribute interest to investment and wealth management users. GalaxyEX will distribute daily interest based on the user's contracted fixed deposit amount. Currently, all platform revenue from this will be invested in the mining fund pool to expand the platform's mining industry.

Annualized Yield (Calculated based on user deposit balance)

Daily Yield = Today's Distributable Interest / Annualized Total Yield

Daily yield is calculated by dividing the total yield of the distributed deposit balance by 30 days.

Minimum Interest Calculation Rules

For USDT, no interest will be accrued if the deposit amount is less than 10,000 USDT in investment and wealth management deposits.

Distributed deposit interest is updated daily at 00:00.
