rarcontents pops up, you should notice there are two options. Go for "Recover from RAR2" and set the name. Select all the files you need to get back and "Start". Recovery process will take some time. You can cancel if you need to. If you run into any issues, you can call "Tech Support" of the company you purchased your data recovery software from. It might take some time to respond. What can a hard drive failure mean? A hard drive failure is a hardware problem. Data can be recovered in case of a few types of failures. A hard drive might fail in any of the following circumstances: Power failure Computer failure Hardware failure Hard drive failure A hard drive failure means that the hardware inside the hard drive has gone wrong. A power failure or a computer failure means that the hardware has failed and that the whole computer is now unusable. Types of hard drive failures There are some different types of hard drive failures. From the basic to the worst. Here they are: Single-disk hard drive failure In a single-disk hard drive, the hard drive has a single hard disk where all the data is stored. An intermittent error can occur in any hard drive. If the error is ignored for a long time, the hard drive can continue working but with reduced speed. After some time, the hard drive will have to be replaced to recover data. This type of failure has a higher chance of recovering data than other types. Multi-disk hard drive failure A multi-disk hard drive failure is more serious. This is when the hard drive has multiple hard disks, but one of the hard disks has failed. A multi-disk hard drive failure has a higher chance of having failed data than a single-disk hard drive failure. It means that all the data on the hard drive are gone. Imbalanced hard drive failure Imbalanced failure is when a hard drive has failed because the space inside the hard drive is not even. There is a big chance of recovering data in this type of failure, if you are lucky enough. A hard drive failure is not a thing to laugh at. It can be a serious situation that can harm your data. Even if you have a backup, it might not be enough to get back all your data. If 520fdb1ae7
