It discusses the implications of the fraud investigation and the report that was published after that. He also discusses the lawsuit that followed Woodford v. Olympus), its settlement, as well as the new olympus board and the fate of olympus executives who were at Olympus while the scandal occurred. Related Topics: Newsletter Promo Summary and Excerpts from Recent Books, Special Special and more from the Harvard Business Press Review. Education surrounding women's sexual and reproductive health can become cloudy, and it is difficult to know who or what to believe. This is what is said with information about abortion, birth control and emergency contraception. Personally, I grew up believing that birth control solves all the problems - skin problems, heavy bleeding, unwanted pregnancy, irregular periods and seizures. At least that's what was reported to us at 14 and all my friends started taking it. Now we know the opposite. While birth control can help with some of these issues, it is much more complicated than a magical panacea. The same goes for the morning pill. Although it may have side effects, Plan B is safe. But I was told emergency contraception would devastate my body and be very careful about taking it (and certainly not taking it too often). It all just goes to show how far we need to go to get to a place where women get all the information and shame no longer rushes in our direction when we ask for it. So I turned to the experts Michelle Metz, MD, and Zev Williams, M.D., Ph.D., to break down exactly what we need to know: what Plan B does for our body, when we take it, how many times you can take it, and what side effects will be. Keep reading to learn everything you need to know about Plan B. Grace Kim/Birdy Plan B is an emergency contraception, not an abortion pill. Emergency contraception does come in various forms. However, most often, the morning after pill refers to plan B One-Step (and generics like Next Choice One Dose) that come with a single pill and can be purchased over the counter at the pharmacy. Plan B pill is a form of emergency contraception that can either prevent or delay ovulation. It can also stop egg fertilization or prevent the implantation of a fertilized egg into the lining of the uterus, explains Metz. Meet expert Michelle Metz, md, is Assistant Clinical Professor of Obstetrics, Gynecology and Reproductive Science at Mount Sinai. It consists of a drug called levonorgestrel, which is similar to the hormone progesterone. Williams adds. Ovulation, which refers to the release of the egg from the ovary, occurs when the brain releases a hormone called luteinizing hormone. LH passes through the blood from the brain into the ovary and signals the egg will be released, Williams said. Plan B prevents LH from being released and thus prevents ovulation. No ovulation and no egg, no fertilization. Additionally, extra contraception makes it much less likely you will get pregnant but doesn't quit existing (Note side: The actual abortion pill is made from a combination of mifepristone and misoprostol, which you can access in your doctor's office or Planned Parenthood and can be taken separately or together depending on the type. type. in tandem, they stop pregnancy from growing and cause your uterus to cramps and bleeding, which leads to miscarriage.) Some women experience nausea, vomiting or headache, while others do not experience any side effects at all. Breast tenderness (progesterone causes breasts to swell), bloating, mood swings (caused by hormonal fluctuations), drowsiness, and/or dizziness are common after taking emergency contraception, Williams said. Another way to think about this is this: If pregnancy occurs, progesterone is produced in the placenta and levels remain elevated throughout pregnancy, so if you take progesterone pills, you get all the symptoms of pregnancy, he adds. Plan B can make your next period come late or early, and usually it will be much heavier and can last longer with more days of bleeding. If your period doesn't come, the first thing you should do is take a pregnancy test, says Metz. Stocksy All the rumors you hear about the morning after pill are completely untrue, Charlotte Wilken-Jensen, head of gynecology and obstetrics at Hvidovre Hospital in Denmark told Vice. Each formula of the morning pill advises you to take it only once a cycle, but in fact, you can safely take it anytime you have unprotected intercourse. Of course, if you take it more than once, your side effects risks increase. Essentially, taking morning after pills is akin to taking a bunch of birth control pills all at once. While you probably won't feel great, it won't negatively affect your health or fertility. In the past, women who need emergency contraception would simply take a super-high dose of birth control, but estrogen just caused a lot of nausea and vomiting, Alyssa Dweck, board-certified o-gin and author of Full From A to I for Your V, told BuzzFeed Health. It is very safe and well tolerated, even in women who are unable to take some birth control pills due to blood clotting disorders. Admittedly, I had no idea what the discussions were about if a woman's weight skewed the effectiveness of the morning-after pill. It wasn't until a reader (Emily's cry) wrote to highlight a question I had seen any research on it what it would have been. A 2011 study found some evidence to support that a woman's weight (particularly over 165 pounds) affects the effectiveness of the pill. However, a study in 2017 found that BMI does not have such an effect. The FDA has issued a statement saying they do not plan to include a warning label on the packaging due to conflicting evidence and limited However, it is important to be able to make informed decisions. The general consensus is that the morning after the pill may be less effective for women with a BMI above 25. According to Ella and Copper IUDs are two other forms of emergency contraception that are effective in all BMI. It's much more effective if you take it for 24 24 but, according to Metz, you can take emergency contraception up to 72 hours after unprotected sex. In order for the morning after the pill to work, it must be taken before ovulation occurred, continues Williams. The data show that after fertilization, the morning after the pill will not prevent the embryo from developing, traveling through the fallopian tube, or implanting in the uterus. Ella, an emergency contraceptive that requires a prescription, can be taken for up to five days after unprotected sex, Williams instructs. Overall, Plan B is safe and well tolerated. Plan B can cause changes in period as well as nausea, vomiting, or headache; however, not everyone experiences side effects. This post was originally published earlier and has since been updated. December 1, 1996 4 min read This story appears in the December 1996 issue of Business Startups magazine. The U.S. Department of Commerce's National Institute of Standards and Technology is conducting a pilot program to improve capital access for small and medium-sized manufacturers in four of its production expansion centers: New York firms can turn to New York Industrial Technology Assistance Corp., which has contracted with an investment banking firm to help companies identify financing goals, create a package to present sources of funding, and shop the package around. They are also working on creating a \$15 million credit pool for companies seeking \$100,000 to \$500,000. Firms considering mergers or acquisitions may also receive advice. For more information call (212) 240-6920 Colorado, Kansas, Missouri and Wyoming companies benefit from capital for manufacturers. A branch of the Mid-America Manufacturing Technology Center in Overland Park, Kansas, this group helps companies in finding and securing angel, enterprise, seed and mezzanine financing, as well as setting up joint ventures. For more information, call (913) 649-4333.Michigan Manufacturers receive assistance from Pathway Partners Ltd., which is a branch of the Michigan Manufacturing Technology Center/Institute of Industrial Technology. Pathway helps facilitate buyouts, mergers and management acquisitions, and helps entrepreneurs gain capital growth. Pathway staff will also work on advisory boards to help companies work through management issues. For more information, call (313) 769-4491.Illinois firms in six counties area around Chicago can look at the Chicago Manufacturing Center Manufacturing Investment Network (MIN) to help with mergers and acquisitions. MIN helps buyers and sellers to estimate the value of their business, prepare for presentations and negotiate deals. The network can also help in developing a list of buyers or sellers, as MIN representatives will handle the due diligence financial institutions require. Call (773) 265-2020. 265-2020. For students at NationalHigh High School who are in 12th grade during the 1996-97 school year and run the business are eligible to participate in the sixth annual Johnson and Wales University National Outstanding High School Entrepreneur Contest.The top 10 finalists will be taken to Providence, Rhode Island, the university to submit their business plans to the judges. The winner receives a renewable scholarship for Johnson and Wales, costing \$20,000 (spread over four years). Three other scholarships will also be awarded. In addition, 10 entrants who submit the best plans for a business that is not yet operational will receive smaller scholarships. The deadline for nominations is January 6, 1997. For more information, call (800) 342-5598. Innovative postal order products sought by the NationalThe National Postal Order Association (NMOA) is looking for 500 unique mail order products to show in its international news-letter, Mail Order Digest. In addition, the NMOA will include 50 of the 500 products (one from each state) on its website within one year. Open only to U.S. manufacturers, the competition will take up to three products from each company. The judging will take place early next year; December 31 is the deadline for entry. For information, call (612) 788-1673. New funding programs offered by New Jersey/California Funding Money to Finance Small Businesses is always a challenge, but a number of new programs have been created to simplify the search. The New Jersey Development Administration and Princeton Capital recently formed a partnership where the state will guarantee up to 50 percent loans of \$100,000 or less made by a financial company for small businesses. The state's receivables program is open to all New Jersey small businesses, but focuses on minority and women-owned firms. The loans are receivable; companies must have contracts with the government or large corporations. For more information, call (609) 292-1890.The Los Angeles Community Development Bank is now open to serving entrepreneurs in the Depression Economic Union Los Angeles Empowerment Area. Focusing primarily on small and medium-sized companies, the bank offers various financing options for enterprises that do not meet traditional lending requirements. Some loans are combined with business and technical assistance. For more information, call (213) 759-7759.
