gigabit ethernet hello i have a problem that someone can help me B4Z: ask your question and see i will have the same problem i have just upgrade to ubuntu 15.04 and for some reason my gpu fan wont stop B4Z: can you pastebin your /var/log/Xorg.0.log? of course i have to do a recovery it has to be from root a man told me on a forum cant remember what was the solution B4Z: stop running and when you can, pastebin it ok wait B4Z: there is an issue with your driver (nouveau), please try with the driver in the Hardware section let me try and stop or no? B4Z: this is a secondary (complementary) issue, so if there's anything on top of that, it will be more stable B4Z: no B4Z: if you have more luck with the nouveau driver, we can continue and your symptoms, can be fixed B4Z: so, do you have a second computer? yes B4Z: ok, then first pastebin the Xorg.0.log file from the non-failing computer, then follow me on this one i have to boot first the other one it crashed at the moment so B4Z: yes, ok, it shouldn't take too long brb B4Z: zal: ouch - I'd 520fdb1ae7
