## Get the Most From Your Current Platform

Deploying industrial security continuous monitoring solutions brings new capabilities to an organization's visibility into their industrial environment. However, greater visibility creates more data to manage. Without the proper resource levels, experience and expertise, the platform's constant flow of data can overwhelm staff and create hurdles to achieve optimization.

Maximize Your Investment

Adopt best in class practices to continuously improve and harden your industrial environment. We review and assess current challenges to maximize use of your existing platform. We examine the current state and plot out a course using Velta Technology's ICS Monitoring Maturity Model.

- Roles & Resource Levels for Support
- Physical On-site Facility Walk-thru
- Daily Operations and Activities
- Localization and Cleanliness of Asset Data
- Alert Analysis of Noise Level
- Depth and Placement of Environment Visibility
- CDV Index Rating Measurements

What Are the Steps to Move Toward Optimization?

Expert Resources to Unlock the Potential of Your Existing Platform

Velta Technology, together with your internal team, completes an on-site review along with an expert analysis of existing challenges and potential. We review the use of the platform and processes to assist in identifying any roadblocks, along with mapping a plan forward to meet your objectives.

Through our experience as **practitioners in both the IT and OT worlds,** we can recognize what is possible and provide the 'how-to' to move forward. Look at us as **an extension to your internal team.**

Find Opportunities to Increase Value

- Improve accuracy and localization of asset inventory
- Increase facility information for operations usage
- Identify methods to reduce alert fatigue
- Focus on operational relevant notifications
- KPI measurements for status and progress tracking
- Improve uptime and decrease problem resolution
- Enhance data through existing systems integration
- Insurance premium and warranty repercussions

A path forward to meet organizational security and digital safety objectives.

Benefits of OT Continuous Monitoring Optimization

Operational Technology (OT) Monitoring Optimization is designed for organizations that have deployed an OT continuous monitoring platform and are experiencing challenges optimizing value and fully benefitting from operational monitoring capabilities.

Velta Technology serves as an extension of your in-house team offering hands-on expertise, knowledge, and best practices acquired working with many organizations and multiple monitoring platform toolsets.

Get the Full Value of Your Continuous Monitoring Platform Today

Velta Technology's mission is to provide tools and methods for Safe, Secure and Efficient Production in a Digital World. From the plant floor, enterprise and ultimately the cloud; we bring decades of deep hands-on experience as practitioners, independent thought leaders, and industry experts.

Our goal is to deliver solutions that meet Digital Safety standards and bring process integrity to your operation.

About Velta Technology

- Over 100 years of combined OT/ IT Industrial, Enterprise & C-suite experience
- Laser-focused on the industrial and manufacturing space
- Platform agnostic while having relationships with world-class partners across technologies & environments
- Proprietary Velta Technology Standards, Platforms & Methodologies
- Specialized Digital Safety / Cybersecurity Training program
- First to the market with Digital Safety as a Service
- Unique capabilities to put all the pieces together for a solution of value
- Qualified to exist on the production floor and in cyberspace - safely
