Radiation therapy plays an important role in the treatment of cancer. However, it can also produce some uncomfortable or even painful side effects on the skin such as itching, redness, blisters, and peeling. To take care of your skin during radiation therapy, follow these tips from certified dermatologists. October 20, 2018 4 min. Area franchisees who have acquired exclusive rights to open franchise units within a certain territory are usually on schedule or deadlines set at the time of signing the agreement. BreakevenA break-even period is considered a time when the franchise business reaches the point where it makes enough revenue to balance the investment. Simply put, when it reaches the point where net profit and net loss are voided. The company is owned by UnitsAlso known as owned by the company locations, these divisions are owned and operated by the parent company, not the franchisee. DocumentFranchise's disclosure document presents a detailed document containing all the important information about the franchise. Assessment assessment is a very important step before signing a franchise deal. People need to assess whether the concept of the franchise meets their requirements or not, this should be done during the disclosure period. Feelt Franchise is an initial investment made by a franchisor to use the name and likeness of a franchise brand. It's a one-off payment. Growth When evaluating any franchised company, it is important to consider the growth rate of the franchise as it relates to potential risk factors that may arise in the future. Manual HoldingSed the advantage of becoming a franchise is that the franchisor provides support and guidance. From the initial stages of customization to operations, franchisees are trained in the right way to manage the business. InvariabilityInvariability or uniformity is important for the franchisor. It is important to ensure the uniformity of the entire franchise network to maintain consistency. Joint Venture Partnership Joint Venture Partnership is a type of agreement that the two companies sign to work together for mutual profit by sharing costs, risks and rewards. KioskKiosks are small portable trolleys. This is an ideal franchising opportunity for those you dream of risking in franchising, but limited by lack of capital. LocationOne of the most important aspects of starting a franchise business finds the perfect place. One mistake of landing in the wrong place can cost you extravagantly. Master FranchiseThe Master Franchise Agreement is contract where franchisors allow franchisees to control franchising activities in specified territory. Net WorthNet stands worth total value or assets. Many franchise brands require minimal net capital in addition to minimum liquidity capital for potential franchisees. OpeningFranchisor and Franchisees play a very important role during the opening of the franchise. They must be coordinated and work towards a common goal. PaymentOther than the original franchise fees, the franchise must make a regular payment to its franchisor. This payment is also called royalties, where the deductible pays a percentage of its earned income. The question is to find questions for yourself and your future franchise to find a better franchise that fits your needs and desires. The relationship between the franchisor and the franchise forms the basis of any franchise system. You need to have a cordial relationship to make your franchise system successful. SupplierA provides services or product to franchisees. Franchisors often establish good relationships with suppliers in which individual franchises receive agreed discounts. The TrademarkYour brand is a critical asset to your franchise system. As a franchisor, your entire system will grow around your trademark and brand. Uniqueness not only attracts promising franchising, but also potential investors. It portrays them that the brand has its own niche customers. Checking This is part of due diligence when buying a franchise. Potential franchisees will contact existing franchise owners in an attempt to test the merits of the franchise's capabilities. Wealthful franchisors fail to give an idea of the level of profitability or net wealth their franchise concept has to offer, potential franchisees will have no basis for negotiating. Younger franchisees are important to young franchisees in today's competitive world. Perseverance, energy, ambition, and creativity is what makes the young successful franchise royalty in this royalty agreement. franchisors do not impose any royalty fees from franchisees. The franchisor receives income exclusively from the sale of products to franchisees. This article was originally published on India franchise Sneha Santra. Just in time for your holiday purchase, the race awards for a Formula One car are up for auction on eBay. There are three days left to bid for the 1989 Benetton Formula One (B189), previously piloted by Formula One ace Alessandro Nannini and Johnny Herbert. It is the same car Nannini took to a controversial victory at this year's Japanese Grand Prix, where racing legend Ayrton Senna picked up the victory but was disqualified for cutting chicanes. The car also scored points in Brazil and Phoenix, as well as a podium in San Marino. The B189 is powered by a carbon fiber chassis, two-seater suspension and Ford F100 engine, DFV V-8 engine. Not the fastest Formula One car ever built, but unlike today's versions, you won't need an army of engineers to keep it running. The car also comes with a variety of spare parts, extra wheels and tires, car covers and team clothing. When we last checked the bidding reached \$75,100 and the reserve was not met. Topics include simple and molecular formulas, mass percentage composition and the name of compounds. It is a good idea to consider these topics by reading the following articles: Answers to each question appear after the test. The simplest formula of matter shows: A. the actual number of atoms of each element in one molecule of matter.B. elements that make up one molecule of matter and the simplest ratio of the total number between atoms.C. the number of molecules in the sample of matter.D. molecular mass of matter. The compound has a molecular mass of 90 units of atomic mass and the simplest C<sub>2</sub>H<sub>5</sub>O formula. Molecular material formula: Using atomic masses C and 12 amu, H and 1 amu, O and 16 amu.A. C<sub>3</sub>H<sub>6</sub>O<sub>3</sub>B. C<sub>4</sub>H<sub>10</sub>O<sub>2</sub>D. C<sub>5</sub>H<sub>14</sub>O Substance phosphorus (P) and oxygen (O) found that the ratio of moles to 0.4 moles P for each mole O. The simplest formula for this substance: A. PO<sub>2</sub>B. P<sub>0</sub>4C. P<sub>5</sub>O<sub>2</sub>D. P<sub>2</sub>O<sub>5</sub> Which sample contains the largest number of molecules? 1.0 g N<sub>2</sub>O<sub>4</sub> (92 amu) Potassium chromate sample, KCrO<sub>4</sub>, contains 40.3% K and 26.8% Cr. Mass percentage O in the sample will be: A. 4 x 16 amu/64B. 40.3 and 26.8 y 67.1C. 100 - (40.3 - 26.8) 23.9D. The sample mass is necessary to complete the calculation. How many grams of oxygen is in one calcium carbonate mole, CaCO<sub>3</sub>? 16 gS. 32 g. 48 g Ion compounds containing Fe<sub>3</sub> and SO<sub>4</sub><sup>2-</sup> will have a formula: A. FeSO<sub>4</sub>B. Fe<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>D. Fe<sub>3</sub> (SO<sub>4</sub>)<sub>2</sub> The connection with the molecular formula Fe<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub> will be called:A. ferrous sulfateB. iron (II) sulfateC. iron (III) sulfideD. Iron (III) sulfate Connection with the molecular formula N<sub>2</sub>O<sub>3</sub> will be called: A. nitrous oxide, dinitrogen trioxideK. nitrogen (III) oxide. Copper sulfate ammonia oxide crystals are actually copper pentagidrate crystals. Molecular formula pentagidrate copper sulfate written as:A. CuSO<sub>4</sub> 5 CuSO<sub>4</sub> and H<sub>2</sub>O.C. CuSO<sub>4</sub> No 5 H<sub>2</sub>O 1. B. elements that make up one molecule of matter and the simplest ratio of the total number between atoms.2. C. C<sub>4</sub>H<sub>10</sub>O<sub>2</sub>C. D. P<sub>2</sub>O<sub>5</sub>A. 1.0 g CH<sub>4</sub> (16 amu)5. C. 100 - (40.3 - 26.8) 23.96. D. 48 grams7. C. Fe<sub>2</sub> (SO<sub>4</sub>)<sub>3</sub>8. D. iron (III) sulfate9. B. dinitrog trioxide10. And, CuSO<sub>4</sub> 5 H<sub>2</sub>O The empirical connection formula is the simplest ratio of the total number between the elements that make up the connection. This practical test of 10 questions is dedicated to finding empirical formulas of chemical compounds. This practical test will require a periodic table. The test answers come after the final question: What is the empirical formula of the compound containing 60.0% sulfur and 40.0% oxygen mass? The compound contains 23.3% magnesium, 30.7% sulfur and 46.0% oxygen. What is the empirical formula for this compound? What is the empirical formula of a compound containing 38.8% carbon, 16.2% hydrogen and 45.1% nitrogen? The nitrogen oxide sample contains 30.4% nitrogen. What is his empirical formula? The arsenic oxide sample contains 75.74% arsenic. What is his empirical formula? What is the empirical formula of the compound containing 26.57% potassium, 35.36% chromium and 38.07% oxygen? What is the empirical formula of the compound, which includes 1.8% hydrogen, 56.1% sulfur and 42.1% oxygen? Boran is a compound containing only boron and hydrogen. If boran was found to contain 88.45% boron, what is its empirical formula? Find an empirical formula for a compound containing 40.6% carbon, 5.1% hydrogen and 54.2% oxygen. What is the empirical formula of a compound containing 47.37% carbon, 10.59% hydrogen and 42.04% oxygen? Remember that the empirical formula is the smallest ratio of the total number. For this reason, it is also called the simplest ratio. When you get the formula, check your answer to make sure that the subscripts cannot be divided into any number (usually 2 or 3 if applicable). If you find a formula from experimental data, you probably won't get the perfect ratio of numbers. It is ok. However, this means that you have to be careful when you round up the numbers to make sure you get the right answer. The chemistry of the real world is even more complicated because atoms sometimes involve unusual connections, so empirical formulas are not necessarily accurate.
