

Vicks steam vaporizer cleaning instructions

I'm not robot  reCAPTCHA

[Continue](#)

If the device doesn't generate enough steam, it's probably due to the low mineral content in the water in your area. Turn off the vaporizer from the electrical outlet and let it cool. Twist and lift to remove the steam block slowly so that the hot water first drains. Add one or two PINCHES salt (1/8 teaspoon) to the water and mix thoroughly. Replace the steam unit and plug in the vaporizer. It should steam within 10 minutes. If the vaporizer still does not generate steam, add another pinch or two of salt as needed (up to 1/2 teaspoon). Add salt only to PINCH, since too much salt can cause excessive boiling or blowing of the fuse. NOTE: If the vaporizer is working normally and is not currently in steam, it should be cleaned. (See the Weekly Care and Cleaning Instructions Service section.) Lack steam, clean the device If your vaporizer is used to work perfectly, but now you lack steam, this is probably because the vaporizer needs a good cleaning. We recommend a quick scheduled cleaning once a week. First, you will need to empty unused water from a water container. Thoroughly rinse the container with water, drain and rub dry with a clean cloth. With the steam block safely off, soak the steam block in 4 inches of white vinegar for 10 minutes. Then, under the sink, with fingers covering the lower hole of the steam block, add tap water through the Steam Guard. Shake vigorously from side to side and then let the water empty through the bottom hole. Repeat several times until the black particles are no longer emitted and the vinegar smell is gone. When using Vicks VapoSteam, make sure that any residue we are cleaned from the steam block with a soft detergent. How to clean vaporizer daily maintenance: Empty unused water from a water container. Thoroughly rinse the container with water, drain and rub dry with a clean cloth. Weekly maintenance: Empty unused water from a water container. Thoroughly rinse the container with water, drain and rub dry with a clean cloth. With the steam block safely off, soak the steam block in 4 inches of white vinegar for 10 minutes. Then, under the sink, with fingers covering the lower hole of the steam block, add tap water through the Steam Guard. Shake vigorously from side to side and then let the water empty through the bottom hole. Repeat several times until the black particles are no longer emitted and the vinegar smell is gone. When using Vicks VapoSteam, make sure that any residue we are cleaned from the steam block with a soft detergent. Rinse the area under steam protection to remove dust or dirt particles. With a long toothpick, you can gently poke through the steam socket and drain hole if became difficult. Reservoir disinfection: Fill the reservoir with water and add 1 teaspoon of bleach per gallon of water. Whistling to get wet all the inner surfaces. Allow to stand for 20-30 minutes. Then empty the tank and rinse with tap water until the smell of bleach disappears. Dry with a clean cloth. How to use Vicks Vicks Open the smell pad bag on a step to expose the pad. Do not touch the open area directly. If you're touching the pads, be sure to wash your hands thoroughly. Insert the scent pads into the slots located at the top of the steam block behind a pair of sockets. The intensity of the vapor can be controlled with 1 or 2 pads. Insert 1 pad into one slot for moderate odor release and insert another pad into the second slot for maximum odor release. Before changing or removing the pads, disconnect the steam block from the socket and allow to cool for 20-30 minutes. The pads must be replaced after 8 hours of use. How to use liquid medicines For best results fill the cup of medicine on a steam block (located directly above the Steam Guard grille) with one tablespoon of INHALANT. If you use Vicks VapoSteam® follow the instructions on the VapoSteam package. Please pay close attention to additional cleaning referrals in the Daily Maintenance and Care and Cleaning section. NOTE: Vicks VapoSteam should not be placed in a cup of medication. It should be poured directly into the vaporizer water container (see the directions of the VapoSteam package). The black particles in the base of the black particles that you see in the vaporizer are absolutely normal. These parts are just to the left of the minerals out of the water. The only reason they turned black is because they went through the electrodes and evaporated. As long as you keep up with the weekly and daily service on the block, you shouldn't experience any problems with its performance. The vaporizer runs too fast/boils over Too much salt has been added to the water. To correct the condition: Turn off the vaporizer from the electrical outlet and let it cool. Pour out the water and rinse the container. Rinse the steam block as described in the Weekly Maintenance section. Refill with fresh water, but not ADD SALT. You live in a tough water area and the minerals in tap water cause the vaporizer to steam quickly. Follow the cleaning instructions at the bullet point above. If the unit is still hovering fast, use 1/2 of distilled water and 1/2 tap water. I misplaced my owner's guide, how can I get a new copy? The home appliance generates steam, sometimes with medicines added to a water tank or a cup of medicine. Clean and maintain the vaporizer regularly. Because each model is slightly different - for example, without water, the vaporizer can't immersed in liquid - visit the Vicks website to download the correct guide. Daily cleaning disconnect the device from the wall and let it cool before doing any cleaning. After each use, when it cools to the touch, completely drain the reservoir. Rinse and empty the reservoir in cold water, over the sink. Wipe dry with a clean, soft cloth. Disinfect the reservoir after an attack, disinfect the reservoir as needed. Fill it with cold water, adding 1 teaspoon of 3 to 5 percent household bleach per gallon of water. Pour the bleach and a mixture of water into the tank. Gently whistl the container to mix the bleach in the water and ensure the insides of the container are coated. Let the bleach and water mixture sit in the tank for at least 20 minutes. Drain the liquid from the block and rinse with clean, cold water until the smell of bleach disappears. Wipe the inside of the tank with a soft, lint-free, clean cloth. Clean the Cup Of Medicines Once the cup of medicine is empty, you will find a mineral oil base at the bottom of the cup; wipe it with a clean cotton swab or a piece of cotton cloth. A cup of medicine is in front and under the steam socket on the device. Do not place VapoSteam products for use with Visiser in a cup of medicine. These products are designed to be used in the reservoir itself. Add fresh water and medicine for each vaporizer use. Don't reuse old water and medicine. Weekly maintenance and cleaning Before storing the vaporizer for use next season, clean the device using the following weekly steps on maintenance and cleaning. Turn the device off the wall and let it cool before trying to clean it. Things you'll need - a clean, lint-free cloth Toothpicks White Distilled Vinegar Pan or a bowl of empty standing water tank. Rinse with cool water and wipe with a clean cloth without lint. Fill a bowl or pan large enough to place a steam block with 3 1/2 inches of vinegar at the bottom. Place it in the kitchen sink. Remove the disconnected steam block from the machine and set it in vinegar. Let the steamer soak in vinegar for 10 minutes. Insert a toothpick into the water intake holes at the bottom and steam the socket at the top to remove any heavy water or other accumulation. Set the toothpick aside. Hold on to the toothpick. Don't let it fall inside the steam block. Cover the lower holes on the steam block - where it sucks water to make steam - with your fingers. Turn on the faucet and direct it so that its water flows into the steam socket at the top of the steam block. As soon as the water starts to fill the block and start to retreat from above, turn off the faucet and cover the socket with On the other hand. Fingers, sealing holes in the bottom and top of the steam device, vigorously shake the steam vapor several times. Drain from the block into the sink. Repeat the process of filling with water and shaking several times. Repeat this until you no longer see the black particles flowing from the steamer as you drain the water and the vinegar smell is gone. Dry all parts of the vaporizer with a clean lint-free cloth before storing in a dry, cool place. Warning Never leave children unattended when Vicks is working. The device produces hot steam that can easily burn curious children. Keep the device at least 4 feet from the child or adult's bed while working. Place it only on a hard, flat surface. Before surgery, confirm that the cord is completely unwinding and tries to avoid patients or children tripping over the cord. For routine cleaning and maintenance, watch the video below for your particular unit. To clean the heater of the humidifier, follow these steps: Make sure the device is turned off and off. Remove the water tank, cooling chamber and removable tray. Fill the base with undiluted white vinegar so that the heating element is submerged in water. Do not immerse the entire base in any liquid. Let the heating element soak in vinegar for at least 20 minutes, never turn on the device while you clean. If you have a lot of mineral buildup on the heating element you can soak it up longer, such as a few hours or overnight. While it is still soaked in vinegar, take a soft bristling brush and scrub away any minerals on the heating element. Empty and thoroughly rinsed with water. VWM845 Warm fog moisturiser V150 Warm steam vaporizer V750 Warm fog humidifier for routine cleaning and maintenance, watch the video below for your particular device. For ultrasonic moisturizers, periodic cleaning of the nebulizer will help it work in the best possible way. The nebulizer, which is a round disk found at the base of the device, vibrates at ultrasonic speed to create fog. Over time, minerals from the water can gather on a nebulizer, causing it to slow down to a rate that is not enough to create fog. At this time, we recommend cleaning your nebulizer with these steps: Please make sure your device is off and off. Remove and empty the water from the tank, then empty the base of the device into the sink. Fill the base with undiluted white vinegar (enough to cover the nebulizer) and let it soak for at least 20 minutes. If you see a strong mineral build-up, you can allow it to soak longer. While the nebulizer is soaking in vinegar, take a cotton swab and wipe around the nebulizer to remove the mineral deposits. Dip the vinegar and rinse the base with water. Please don't run the device with vinegar in it.
