## Red hat rhcsa study guide pdf

This is a Red Hat Certified System Administrator (RHCSA) Study Guide. About the RHCSA Exam: The RHCSA exam is hands on and performance-based (no multiple-choice questions). No real exam material is included in this guide. The RHCSA (EX200) Exam lasts 2.5 hours. The minimum score is 210 out of 300 points (70%). The exam consists of about 10 to 15 questions. The exam objectives are here: More information about the exam can be found here: 10/13/2019 Update: I had to take a few months off due to work-related problems, but I do plan to continue this project as time permits. RHEL 8 was recently released. There seem to be no changes to the objectives. I recently switched from Syncthing to Dropbox because I needed a cloud backup of all my important files, so you'll notice that I'll be slowly changing links from /Sync to /Dropbox/sync0001. Please change them to what is suitable on your system. To build this study guide, I use the following free software: To get the most out of this study guide, I recommend the following: Have installed a standalone computer, or virtual machine, with the latest version of CentOS to do the exercises ( . Get a second computer or host PC that meets the requirements below. You install the software below on this machine. If you decide to run CentOS in a guest VM: I recommend having at least 2 monitors on the host PC. This makes it easier to do the examples and follow the study guide at the same time. I recommend using KVM as your virtualization software. The host PC will need to have a fast CPU, and lots of RAM (my original setup, an older quad-core AMD CPU with 4GB of RAM, couldn't handle it at all). The host PC operating system should make it possible: to run a guest CentOS VM. installing Freemind, Zim, Anki and git-gui. I recommend Fedora: On Fedora 30, you would install the software with one of these 2 commands: CASE A: sudo is not enabled for your account: su -c dnf install freemind zim anki git-gui CASE B: sudo is enabled for your account: sudo dnf install freemind zim anki git-gui (optional) Sign up for a free AnkiWeb account ( Clone to this directory on your Linux PC: /home/your\_username/Sync/PROJECTS/RHCSA After cloning the git repository, RHCSA must have the following files /folders inside: anki (contains exported text file with flashcard Q&As) CODE\_OF\_CONDUCT.md CONTRIBUTING.md cpp\_files (c++ files I created) examples (includes all examples of study guides) lectures - (includes lectures on a variety of GNU/Linux related topics) LICENSE.md (contains GPL v3 license text) (contains list text files I use for examples) MILESTONES.md (contains GPL v3 license text) (contains list text files I use for examples) MILESTONES.md (contains GPL v3 license text) (contains list text files that I use for examples) MILESTONES.md (contains GPL v3 license text) (contains list of text files I use use for sample) MILESTONES.md (includes GPL v3 license text) (contains list of text files I use for examples) MILESTONES.md (contains GPL v3 license text) (contains list text files that I use for examples) MILESTONES.md (contains GPL v3 license text) (keep all mindmaps created with Freemind) objectives (includes the RHCSA objectives) PULL\_REQUEST\_TEMPLATE.md README.md (the home page of the study guide) zim (keeps all zim wiki pages) .git (hidden file) .github (hidden file) When you run Zim, you want to open the zim folder as a notebook. Once you do, you can navigate/edit all wiki pages. Freemind lets you open and edit the mind maps, and anki allows you to view/edit the flashcards. git/git-gui allows you to check out the study guide, edit parts of it if you want, and make pull requests to update the main branch. I will periodically export the latest version of the Anki flashcards to the anki directory. Enjoy the final RHCSA Study Guide! You need to log in to join this conversation. .
