

KEEP PET PROJECT

- KeepPet database associated with public blockchain system.
- Our database works on "Amazon Web Service" server
- The Ethereum platform is used for verification as one of the most popular and trusted solutions
- In future KeepPet's data storage system will be based on its own distributed database.

- Web interfaces and mobile applications for end-users.
- KeepPet app working as an animal passport and solving health data storage issues
- SpotPet app for geolocation services and social functions
- Other applications and interfaces are planned for the future.

- Authorised Centre (AC) has the opportunity to add information related to its work to the animal's passport. AC's examples:
 - Veterinary clinics
 - Border and veterinary control
 - State animal federations
 - Law enforcement

- Service Centre (SC) has access to data from the KeepPet system and provides services based on it. SC's examples:
 - Pet food and products manufactures, pet shops
 - Animal care communities
 - Breeding clubs
 - Kennels, training and other pet services
