But when I try to build my project it is not able to build from any of the specified libraries, it always skips the Build Libraries step and goes directly to the Publish Project, this is the error message I get in the build logs: [Error] Cannot find one or more files for project [XXXXXXXXXXXX], could not locate the default library [F:\Software\NetBeans\Inventor\build\build-in-2017.1\win32-x86_64\lib\build-in.xml]. I am using NetBeans IDE on Windows 10. Is there anything I am missing? A: The answer is given by the error message: In Netbeans, I believe the correct location of the build-in.xml file is under: C:\Users\\AppData\Roaming\NetBeans\8.1\System\Library\build-built-in.xml I changed my work environment to use this location, and everything worked as it should. Q: Add a style and a javascript inside the style I would like to add a style and a script inside the style. #Container { padding: 0; margin: 0; background: red; height: 400px; } #Test { padding: 5px; background: green; I would like to add these two divs inside #Container (and keep both id and class withing #Container) alert('hell'); The 520fdb1ac7
