Carrier system design manual part 2 pdf

Add tags for the Carrier design guide. Part 2, Air Distribution.. Be the first. The Carrier Design Guide is the first practical guide to designing air conditioning systems. This easy-to-use link is designed specifically for a design engineer and consultant. It covers every step of the design process, from load assessment to selection and design of the appropriate system. You can read all the carrier TDP from E.E. The complete guide to system design consists of twelve (12) individual books. PART 1 - LOAD ESTIMATING Guide to practical cooling and heating load assessments. Eight chapters include: survey and load assessment, design conditions, heat storage, solar heat gain, heat and moisture flow, infiltration and ventilation, internal and systemic heat amplification, applied psychrometry. PART 2 - AIR DISTRIBUTION includes data and examples as a guide to the practical design and layout of duct, duct and air distribution components. Covers practical design and layout, including data and examples of conventional air conditioning systems - pipeline design, plumbing, refrigerant pipelines, steam pipes. PART 4 - REFRIGERANTS, BRINES, OILS Guide to presentations in the field of application and selection of brine and oil refrigerants when used with air conditioning systems. PART 5 - WATER CONDITIONING Background guide to better understand the causes, effects and prevention of water problems in various circulatory systems. Some of the most common methods for reducing economies of scale and corrosion are also discussed. PART 6 - AIR HANDLING Equipment Carrier System Design Manual 12 Books (part 7 to part 12) Discussion in the choice and application of air treatment equipment for conventional air conditioning systems - fans, air conditioning, unitary and accessory equipment. PART 7 - REFRIGERATION EQUIPMENT covers the selection and use of refrigeration equipment for conventional air conditioning systems: reciprocal centrifugal, absorption, absorption centrifugal combined refrigeration machines; equipment to reject heat. PART 8 - AUXILIARY EQUIPMENT Book consists of practical data on the selection and application of accessories used with air conditioning systems - centrifugal pumps, engines and engine control, boilers, various drives. PART 9 - SYSTEMS AND APPLICATIONS Guide to choosing an air conditioning system used with specific applications. PART 10 - ALL-AIR SYSTEMS Presentation of data and engineering procedures to guide an engineer in practical design Systems. The full range covers conventional, permanent volume induction, multi-zone, dual duct, variable volume and dual piping systems. PART 11 - AIR-WATER SYSTEMS Guide for Air Water Systems Engineer for Use Rooms on the perimeter of a high-rise building; In apartment buildings where cooling or heating may be required at the same time in neighbouring premises; where the working space of the duct is at a minimum level. PART 12 - WATER AND DX SYSTEMS A, which includes data and engineering procedures, in the practical design of water systems and DX.
