

Testing Process

TEST 1 Take swab test

Submit to onsite testing facility

From this point the 72 hour clock starts ticking

35-45 minutes later

25 -30 Minutes later

Positive result -potentially infected

I-warrant record updates

Red Light

Leave site and self isolate for 14 days

Negative result = virus clear

I-warrant record updates

Green light

Enter Green zone of production bubble

no social distancing needed

Normal working environment

71 Hours left after test result

After three days (72 hours)

I-warrant record updates

Grey light

Out to test time range

Test 2

re test all at the 3 day point. Every one to ensure they were not gestating but not detectable at the point of original test. if they get "2 greens" then there is in no need to further retest

Not necessarily infected

Classified as untested

Re start process as needed if

anyone who has left the site

anyone feeling unwell

If any body has entered the bubble untested for any reason
