## Dwg to pdf.pc3 missing

Every time I go to print I see the following: No (missing: DWG on PDF.pc3) To print I need to change the print settings to print like PDF.pc3 and customize the layout of the page every time. I want to be able to just print out the file as I would like to use AutoCAD. I was told that the DWG line on PDF.pc3 is a feature of AutoCADs built in the driver, but not supported by BricsCAD. Does anyone have any suggestions for me? Is there a way to import a driver from AutoCAD and include it in BricsCAD? How can I know what file to look for? Thank you in advance, it's really disappointing. ㄟ (CHINESE SIMPLIFIED) ANGIS FRANCEAS (FRANCE) DEJIC (GERMANY) 日コい (JAPANESE) ENGLISH (ENGLISH) POLSKI (POLISH) (RUSSIA) ESPA'OL (SPANISH) TURKCIA (TURKEY) ITALIANO (ITALIAN) May need to restructure or add a new DWG to PDF.pc3 software installation. When you try to build or edit the page setting, AutoCAD displays the following message: AutoCAD Warning (printer's name). The No plot has been replaced. On Windows: On macOS: Reasons: This warning appears because the configuration of the site the drawing refers to has one or more of the following problems: the system printer driver for the specified device has not been installed in the local system. The PC3 file referred to in the message is unavailable or missing from the local workstation. The system printer driver installed on the local workstation is a different version than the PC3 file you choose. The printer driver is damaged or incompatible with the system environment. The localized installation of the system printer driver is damaged. A localized copy of the PC3 file is damaged. The printer does not connect to the computer. Equipment is damaged. The picture or layout is configured with a PC3 file that is not available. The drawing or layout containing the site configuration is damaged. Try the following solutions, depending on the applicable scenario: Make one of the following: Install the missing printer driver. Download the printer driver from the manufacturer's website and install it. Double-click the Autodesk Plotter manager from the Windows control panel. Double-click Add-A-Plotter Wizard. Click on. Choose a system And click On. Choose a newly installed system printer. Finish the steps of the master. Change the printer to set up the page. Open the drawing and switch to the model/layout where the warning message pops up. Run the PAGESETUP command. Click Change. Change the printer from a non-existent plotter to an existing or none. Click OK and then close. Save the picture. Use convert DWG to remove all stored plotters in one or more drawings (see DWG Convert Dialog Box). The local system printer driver version is different from the one shown in the selected PC3 file to install the same version of the system driver and be sure to provide access to the corresponding PC3 file with the same name as the one in the warning. The printer driver is damaged or incompatible with the system environment to remove the printer driver from the operating system by restarting and reinstalling the driver. Before reinstalling the driver, it is recommended to restart the system. For HP plotters, try one of the universal drivers (see HP printer error with AutoCAD).
