The Addi knitting machine allows knitting of fabrics in both level and round technique. So there's a lot of knitting like you who adore this machine because it can also create models where flat pieces are needed. You may have already mastered the basic types of knitting seams, so you want to learn more seam patterns that you can experiment on in your Addi Knitting Machine, that's why you came across this article. If so, welcome to the board because in this blog, we will give you your collection of the best Addi Knitting Machine samples that we have assembled just for you. Where to Find Wonderful Addi Knitting Machine Patterns Every Beginner Can Follow Through? There are actually tone patterns that can help you create the most wonderful knitting your Addi knitting machine can do. The most friend's advice we can give is to join or follow online groups like those on Facebook or Instagram. Closed Addi Express groups For example, with easy grouping and tracking through threads in a group called Addi King Loomers and Knitting on Facebook, you can be warmly greeted and accommodate by other Addi knitters with their question. These groups are usually closed and exclusive groups, and you should fill out information forms before you can actually join. If you are accepted into the group, you will be inundated with many brilliant projects by both beginners and professionals. In addition, you can access a tone of free samples of Addi knitting machines. This is the world you would want, especially if you truly and deeply love knitting with the help of your Addi. Different patterns for Addi Express Pro and Addi Express King Since there are two types of Addi Knitted Machine, Addi Express Professional and Addi Express King Size, we will present five knitting projects with awesome patterns from enthusiastic knitting that are done with each type of machine. There are different types of projects that you can do with smaller and larger Addi, so we go through each first. What Can You Do With Addi Express Professional and Addi Express King Size Machines? Hats and scarves are the most popular projects to be done with Addi Knitting Machines, but once you've been able to master the creation of flat fabrics using these machines instead of circular, then you'll have endless possibilities. You can create pillows, turtlenems, bags, toys and others, so don't let your imagination limit you. Some of the most common projects created by Addi Knitting Machines are as follows: Socks Mittens Cozies Gloves Hats Scarves Bonfire Beanies Puloves Wings Afghans Knitting small objects with Addi Knitting Machine will last only a few minutes, but larger than puloves will take a few hours. Because this machine has a small learning curve, you can learn a number of techniques, such as limited fair isles, adding edges and borders, and ribs. Let me give you The idea of the difference between Addi Express Professional and Addi Express King Size machines and what you can do with them, below is a brief comparison between the two. Addi Express Professional Machine Smaller Machine with 22 Needles. Suitable for creating small pieces for toddlers and children. It can generate circular knitted tubes about three inches in width. You can create larger pieces, but you need to fly them into straight plates first and then join the pieces. Addi Express King Size Machine Larger machine with 46 needles, so you have more options. Suitable for creating knitted pieces for adults (hats, scarves, etc.). It can create circular knitted tubes with about 21 inches of circa 600 inches. By the way, if you want to know more about the types of Addi Knitting Machines and what you can do with them, you can see this article. So without further ado, let's now dive into yet another knitting adventure! The popular Addi Express Professional Machine Knitting Patterns Pocket Slipper pattern in this section was from Littlejohn's Yarn and the other four were selected from Yay to Yarn's video tutorials for the Addi Express Pro machine knitting patterns. #1 Pocket Slippers This pocket slipper pattern was originally created by Loretta Elmore. In a video tutorial in the following section by Alysha Littlejohn, she added a little of her style to Loretta's original pattern. She used the worst weight yarn in two colors: Red Heart Super Saver (variegated) and Gray. The entire tube is 18.5 inches long with a total of 100 rows, with 65 of different colours and the remaining 35 being gray. How to fly a pocket slipper pattern The first thing you need to do is create a tube using the addi Express Pro knitting machine and then follow the video tutorial below on how to complete a pocket slipper piece. VIDEO: #2 Fingerless Gloves This fingerless glove/glove has a long tail, poured with a rib cuff and clean end edges. The ribbed cuff has a hole to part with your thumb that you need to fly when you finish knitting the rest of the glove using your Addi Express Pro machine. The glove also uses a high-weight yarn and has 15 types of ribbed cuff. How to fly fingerless gloves Pattern VIDEO: #3 Cell Phone Wristlet This is an Addi Express Pro knitting machine pattern from Yay to yarn uses the worst weight yarn. The cell phone sleeve consists of 60 lines corresponding to the average mobile phone. For larger phones, you only need to make a longer phone sleeve by knitting multiple lines. How to fly a pattern of cell phone bracelets VIDEO: #4 Mitten This mitten pattern is similar to the pattern of fingerless gloves above, except that it is not without fingers. It also has a long tail cast on, a ribbed cuff, and a separate thumb all knitted using a large weight yarn: Yarn Bee First Love in Thrill of Color. Ribs for gloves is knitting using 10 rows of ordinary Stockinette seams by addi Express Pro and purl ridges manually created from the stacked columns piece. How to fly mitten pattern VIDEO: #5 Two-color knitted infinity scarf This two-color knitted infinity scarf pattern uses Bernat sheep's (ish) yarn in teal and magenta paint. These two sections are combined with knitted knots and the ends of each knitted tube are transplanted together instead of stitched. For this project you must use two balls (teal and magenta) in three ounces of heavy yarn weight with about 167 meters per ball. It consists of two knitted tubes for two coloured yarns and has 245 lines each tube. How to fly a two-color knitted endless scarf VIDEO: Popular Addi Express King Size Machine Knitting Patterns #1 Reversible Fair Isle Beanie by Margaret Olander This fair pattern isle beanie is proposed for intermediate to advanced Addi Express King Size machine users. The fair isle technique is made by running two color yarns in one row, making a few seams knitted in one color and some in another color to make very beautiful patterns. In the video tutorial below, Margaret uses pink, purple, and mustard yarn colors and created 130 lines together for beanie. How to fly the reversible Fair Isle Beanie VIDEO: #2 Double-Layer Rebrad Brim Beanie by Melissa Sutcliffe This pattern is recommended for intermediate users because ribs on the Addi Express King Size machine can be dull and frustrating. In Margaret Olander's version of Melissa's sample in the video tutorial, Margaret used a very heavy American worst weight yarn, so hers came out longer. Beanie has a closed container on each of the knitted tube ends and has a total of 111 lines. How to fly a double layer of ribbed Brim Beanie VIDEO: #3 Ralph Lauren Fringed Scarf by Melissa (The Crafty Ginger) For this pattern, Melissa was inspired from one of Ralph Lauren's collection pieces from fall 2015, worth more than a thousand US dollars during that time. The piece looks like a scarf with very long fringes, but Meliss's piece is shorter because the yarn she used is quite expensive. With Melissa's fringe pattern, you can create a piece with grandpa's quality. You also need about a thousand feet of yarn to complete this project. How to Knit a Ralph Lauren Fringed Scarf VIDEO: #4 Crossover Cowl by Alysha Littlejohn This cow pattern is a very simple pattern and you can finish it instantly through your Addi Express King Size machine. The crossover cow uses yarn with the worst weight and has a total of 175 rows (35-inch tube). For this project, you need to do some crochet at the ends of the pipe to complete the cow. How to fly Crossover Cowl VIDEO: #5 Dragon scales scarf by Leighla Miharo Leighla's dragon pattern uses thinner acrylic yarn and has five But you can make yours longer. The knitting process starts by casting on 3 seams and then enlarged each other type so that the knitted fabric grows on one side. The scales are formed by crocheting the 10 seams and continue to increase the seam until the beginning of the next scale. The process is done several times until you reach the desired number of scales. How to fly the dragon scarf VIDEO: How to wrap you having fun with your newly discovered knitting patterns for your Addi Express? Categories Knitting Post navigation13 Best knitting needles to use for beginners in 202010 Best embroidery machine for home businesses in the UK If you've been knitting for a while, you would no doubt have heard about the amazing Addi knitting machine. A knitted machine is a device used to make knitted fabrics and clothing in a semi- or fully automated manner. Using a knitting machine of all kinds is much faster than hand knitting, and owning a machine is ideal for people who knit for profit, knitting for charity, or simply knitting a lot. Addi knitting machine is a cheaper version of the full-blown knitting machine, and in this review, I will tell you something about the Addi Knitting Machine and how it works. I used to own the Ultimate Knitting Machine sweater before I was too busy with my teaching job, and I was addicted to making and selling cute baby clothes. I also had empisal, but the smaller machine was much simpler to operate. I would like to get back into it, and the Addi Knit machine below is something I'll definitely buy next time my brother comes to visit from America. After I went to my Addi friends, and saw how easy it was to use, I just can't wait to get my own. The price is also excellent, especially if you can't afford a more expensive knit machine. Having an addi knitting machine allows you to have a knitting machine without a high price tag, and is much smaller than a normal machine, making storing it easy. Addi is based on a knitted loom, and you could call it a loom knitting machine. Even people who only have one arm or arthritis in their hands can also enjoy knitting again using one of the models of the addi Express knitting machine. To learn more about machines and which Addi Knitting Machine will be better for you, simply click on the blue links or on the pictures Addi has also recently bought new and improved versions of its existing machines, which I have included below. The new addiExpress Hook is especially suitable for working with addiExpress machines or for use with complex knitting and crochet techniques. Made in Germany, so you know his quality work. Before trying to use it, I looked at the knitting in the box for a while. I like crochet, and I never wanted to learn how to knit. Since All I know is crochet, I felt a weakness in trying to use the machine and procrastination. I had to play with the machine for a while to get used to it. I put the yarn on and then had to take off due to either fallen seams (no machines error) or do not know how when you're done, pull yourself out of the yarn. Learning to get the yarn off the machine without a project to untie was a challenge, but thanks to YouTube, I found out. :) Now I like the machine. He makes great jokes. I made a scarf for my daughter, and she said the scarf looked like a store bought. I used a Lion Brand Scarf yarn. The machine is very well made and worth the price. I'm looking forward to the funting scarf. I hope that in the future the manufacturer will make a regular knitting machine. That would be nice for bigger projects. Then there are our old favorites – still very popular. Addi-Express Professional Knitting Machine This is the original Addi Express Knit machine and is smaller than the king-size version. It has 22 needles and is great for making scarves, pončs, pillows and afghans. You can knit in minutes on the Addi Express! Just pick up and watch your creations grow before your eyes. The Addi-Express Professional knitter has 22 needles. Circular knitted objects – Ø 10 to 15 cm (4 to 6). Ordinary knitted objects – 15 to 20 cm wide (6 to 8). You can use about any type before, but the recommended yarn thickness is 3.5 – 8. Manufactured and manufactured in Germany according to the standards for precision and use of the best materials available. All Addi knitting needles are made according to precise metric sizes. Designed and built in Germany to the standards and with the best materials available. Warranty of service for all manufacturer's faults. Features of Addi Knitted Machine – This includes all of the above models With king-sized Addi knitting machine, you can enjoy the manufacture of even larger knitted items and thus more options. The Addi-Express Kingsize model is mounted on the table and remains securely in position during the feeding. This is done with your bare hands, without the need for a drill kit. With 46 smovers, you'll be knitting trendy scarves and wooly hats in minutes and you'll be knitting smart chairs and within hours. This is great for anyone who wants to fly for profit or even just knitting for family and friends. All pins have a number and there is an electronic line counter that allows for the work to be done accurately. The addi knitting machine is best circulated, but it can also produce flat plates. There are many books and add-ons to compliment your new Addi Knitting Machine. Please note: Any Addi product purchased from an authorized Addi dealer is available with a lifetime warranty from any manufacturer's fault. Watch the video above to see how you can do with the hood in 30 minutes or less on the Addi knitting machine. Q&A Question: Can you make straight plates with the Addi Express King Size Machine? Da. There's a button near the turn handle. Upwards is the knitting of a straight pane. Then simply knit from the white needle to the white needle by turning the lever in one direction. Stop, then turn the lever in the opposite direction. Slowly go back and forth. If you want a shorter plate, you can place the stopper in front of the needle. Continue back and forth until your panel is required length. Watch the demo video below. Can you make different sizes of a hat with one machine? Yes, any size is possible. Because Addi can make straight pieces you can put together to make a beeh. So the answer is yes. Can you make jokes with the Addi knitted machine? Yes, I can, but to me, the flat way the plate sticks to too much and constantly lowers the seams. If we did it, it would be easier to use the circular mode. Can it be increased and reduced on these machines? My experience is limited, but without increasing or lowering in circular knitting mode, unless you might somehow drop the seams, but from what I've done, it's not a good idea. The number of stitches is constantly in circular mode with this machine. If you knit a flat plate, there is no problem to increase and reduce from the end of the lines. How do you grow different hat sizes? To make hats, select REGULAR and not the King Size computer. The only way to change is knitting with a small amount of needles – regular is perfect for hats – the size of the KING is better for larger projects, shawls etc. that you knit back and forth with! What should I do to stop the seams for adding a knitting machine? It happens from time to time, especially when I start flying something new. This is a common thing with Addi, but it is due to the fact that the knitting machine does not come with weights, as other knitting machines do. Simply buy some knitting machine weights to hang and end knitting and the problem needs to be solved. Addi doesn't work weights for his machines, but any knitting machine weights will work here. My counter isn't very accurate. What can I do about it? This is one of the co-decisions of the machine. The line counter is not so accurate. I don't trust her, and I always just count it to double-check. Let us hope that this is a problem that manufacturers will get to rectification in the future. I have both addi express and knitting apparatus Addi King. I have to say, I love both things. It is a quiet machine and rarely drops the seams; if this is usually an operator error. This machine is a perfectly perfect tool for fast and easy making stockinette tubes! I had mixed feelings about whether to buy an Addi Knit machine, based on the negative reviews I've read. I must say, I am extremely impressed, and it was worth every dollar spent. In the event of a break, they even throw extra needles, even though I can't even think of breaking it, they're so disturbing. It can be said that the basement bargain is not made in chin thing. These Addi knitted machines are great. They are stured and well made with interior parts designed in Germany.. Not China. You get what you pay for. I also bought them for presents. Book samples are available for these, but you really need to search online for them. You can knit anything you can think of on these. They are the best machines in their price range and you really will enjoy knitting on them, especially if you have a carpal tunnel like me. I bought both Addi Express Machines (regular and royal size).... You're both great. I like the speed of creating knitted flats. Just join the panels for super fast fashion, dued, shawls, pillows, etc. Making hats and scarves etc. (when knitting in circles) is a lot of fun too. If you want to see more comments on the Addi Knitted Machine, you can visit amazon below. For a cheaper option or a children's version of the knit machine, try the Singer knitted machine. Other loom knitted machines that you may want to check out include a D&D Professional Knitter or even a Pryn knitter. Share on Facebook Tweet Follow Us Share Share Share Share Share Share Share
