Please beware of those who ask/demand money on behalf of Iran. Thanks.Disclaimer: This site has nothing to do with the government website of Indian Railways. This site does not claim to be 100% accurate of fast-changing rail information. You are responsible for independently confirming the veracity of the information through other sources. India Rail Info Privacy Policy Indian Railway EnquiryPNR StatusLive Train StatusTrains between the two stations Of The ScheduleTrainIndian Railways is the country's most important transportation network and transports passengers and cargo to all corners of the country. It supports the socio-economic structure of the country. To get an idea of the vast network of Indian railways, you need to rely on the railway map of India. The railway map shows the railway network of each Indian state, as well as the main stations present in the country. The map is very useful for travelers who travel quite often and helps them to plan their travel itineraries accordingly. The Indian railway PDF card is free to download and is the ultimate companion for travelers/tourists in India. Check out the latest Indian Rail Map 2020, which includes updated information related to new stations and rail routes. Indian railways also play a prominent role in promoting tourism in the country. Several luxury trains cover various tourist destinations across the country. In the multi-track network, railways operate in both long-distance and suburban rail systems. The track of the railway can be defined as a clear minimum perpendicular distance between the inner faces of the two rails. It uses four sensors, namely a wide Gauge, a standard Gauge, a sensor meter, and a narrow Gauge.Broad Gauge: it is also called a wide gauge or a large line; The distance of two railroad tracks is 1676mm (5ft 6in). It is the most dominant use of the Indian railway track in the country. Standard sensor: In a standard gauge, the distance between the two railroad tracks is 1,435 mm (4 feet 8 1/2 inches). It is mainly used for urban rail transit systems such as Monorail, Metro and Tram. The metro lines that operate in urban areas are mostly built in urban Gauge. Meter Gauge: The distance between the two railroad tracks is 1000 mm (3 feet 3 3/8 in). They are built to reduce the cost. Narrow sensor: This is a railway track in which the distance between the two tracks is 762 mm (2 feet 6 inches/ mm (2 feet). Indian Railways is run by the Government of India and has a separate department called the Ministry of Railways. Indian railways are the main mode of transport and connect all four regions of the country, such as the North, South, West and East. It depicts an IR network scattered in different areas of the country. Indian Railways divides its activities zones, which in turn are divided into units for administrative convenience. Due to the large size of the country and the extensive railway network, the Indian Railways are divided into 16 zones. Each zone is run by the general manager and the units are controlled by divisional railway managers (DRM). Find the following list featuring rail zones along with its headquarters: East Central Area: HajipurCentral Areas: Mumbai East Coast Areas: BhubaneswarNorth Central Area: Allahabad Eastern Area: KolkataNorth East Region: GorakhpurNortheast Border Area: GuwahatiNorth West Area: JaipurNorthern Areas: DelhiSouth East Central Region: DelhiSouth East Central Region: Area: BilaspurSouth Central Area: SecunderabadSouth Eastern Area: KolkataSouthern Area: ChennaiSouth Western Area: HubliWestern Area: MumbaiWest Central Area: JabalpurKonkan Area: Belapur MumbaiInd railways Atlas offers a comprehensive map of the Indian railway line passing ruts of transformation, international routes and so on. It also highlights the state capital, the main trains, the division's headquarters, and the headquarters of the rail zone. Now you can share your current train location through Google Maps for your family and friends. The feature is very similar to the place in real 2000 WhatsApp. Two features are important here, i.e. the last railway station and ETA (estimated travel time). The last train station indicates that the recent station indicates that either the train has arrived, departed, or passed a specific station. ETA offers approximate arrival times for upcoming stations. CloseDisclaimer: Every effort has been made to make this image accurate. Indian railways are the main mode of transport for freight and passenger transport in India and play an important role in the development of industry and agriculture. Indian railways are honored to be one of the largest and busiest rail networks in the world. It operates 9,000 passenger trains and carries almost 18 million passengers every day. The Indian Railway employs about 1.4 million people. Indian railways have served the people of India with great pride for more than two centuries. The first train journey was made in India in 1851, between Roorkee and Piran Kailiyar - to transfer large amounts of clay to Rorkee. The first journey by passenger train began on April 16, 1853 between Bori Bandera, Bombay and Thane, covering a distance of 21 miles, thus marking the official birth of the rail network in India. The Indian Railway Network links the social, and the economic structure of the country and covers the entire country, from north to south and from east to west, narrowing the distance barrier for its people. On the railway India unites the whole country, thus creating a sense of unity among the Indians. India's application for a train to the Himalayan heights and the aim of the railway to link with all the capitals of the states of the north-eastern region led to the north-East Border Railway (NRF) running the train between Dibrugarh and Naharlagun. Arunachal Pradesh finally has a much-needed rail link. According to media reports, Naharlagun, a town near the state capital Itanagara, is now part of India's railway map. The Harmuti-Naharlagun line, which became functional in April 2014, was conceived in 1997 as part of a broader plan to improve communication in the north-east.
