Each year, Super Mario Bros. celebrates its 30th anniversary, and its influence on the industry hasn't been confined to video games. Miyamoto's work for Game & Watch, Game Boy, and Nintendo Entertainment System, as well as the influence he exerted on the music on many games, is seen in a wide variety of fields. He has even been cited by the inventor of the smartphone, Steve Jobs, as a huge influence in the smartphone industry. "I got to work with the Mario brothers," Jobs said at the 2005 D conference. "I learned a lot from them. They taught me how to manage people." The two met on the then-hot

platform of the then-new Apple IIgs computer, which Jobs called a “Macintosh clone.” He said that he and the brothers were working on games for the machine, which didn't sell very well in the U.S. Nintendo of America was also rumored to be developing a game for the platform. “I saw them come by the machine, and I was very intimidated by them,” Jobs said. “They really knew what they were doing. Their business was in Japan.” He continued: “I was like, ‘Who are these guys? Do I really have to work with them?’” Miyamoto's work with Nintendo is credited with introducing the platforming genre of video games to the world. It's been just over 40 years since Super Mario Bros. was released on the Nintendo Entertainment System, but it is still one of the best-selling games on the platform, and it influenced game design for decades. Super Mario Bros. is credited with raising the popularity of platformers to an unprecedented level. Miyamoto and his work for Nintendo and other companies were an inspiration to the makers of iPhones and the apps that run on them. At the D 520fdb1ae7
