Front Matter Jenő Nagy, Knut Bjørlykke Back Matter Download the full Petroleum Geology Libyan Book PDF, EPUB, Tuebl, Textbook, Mobi or read online in Petroleum Geology Libya anytime and anywhere on any device. Get free access to your library by creating an account, quickly download, and use your ads for free. Author : Don Hallett,Daniel Clark-LowesPublisher :Release date:2017-03-08Copy pages :404ISBN : 044463519X GET BOOKSummary : Libyan oil geology. The second edition systematically examines Libya's research history, plate tectonic, structural development, stratigraphy, geochemistry and oil systems, and includes new valuable chapters on oil and gas purification, production and reserves. Since the previous edition published in 2002, there have been many events in Libya, including the lifting of sanctions, a new licensing system with licensing rounds in 2004, 2005, 2006 and 2007, numerous new research wells, discoveries and developments on the ground, and regime changes. Many new data on Libyan geology have been published over the last 16 years, but it is widely scattered in literature. Much of the older data has been replaced and a number of major publications, in particular those published in Libya, are difficult to access. This second edition provides an updated reference source that includes a lot of new information, in particular on oil systems, reserves, oil and gas fields, game shipping lanes and remaining potential. It presents the results of the latest research and a detailed description of the geology of the Libyan Sea. The book includes an extensive and comprehensive bibliography. Presents more than 180 full color illustrations, including maps, diagrams and diagrams illustrating the main concepts in a clear and concise manner Author with two recognized world institutions on geology in Libya, with more than 40 years of experience in Libya among them Providing an expanded and updated version of the bestselling previous edition, the nickname Explorationist's Bible Lays the Basis for Post-Revolution to The Age of Exploration in Libya Author : Don HallettPublisher: Release Date : 2002-02-26Total pages: 508ISBN: 9780080538693 GET BOOKSummary: Libya has the largest oil reserves of any country in Africa and since production began in 1961 more than 20 billion barrels of oil have been produced. Libya is expected to reach the mid-point of exhaustion of reserves in 2001 and provides a timely end to the review of the oil exploration situation in Libya. A large amount of data on Libyan geology has been published, but this is scattered in literature; much of the older data has been replaced and a number of major publications, in particular those published in Libya, are difficult to find. This book is the first attempt to create a comprehensive synthesis of oil geology in Libya. It is clear that published data, supplemented by the author's experience of ten years of work in Libya. The aim of the book is to systematically review the tectonics of the Libyan plate, structural development, stratigraphic, geochemical and oil systems, as well as to provide valuable new data on fields, production and reserves. This volume will provide a ready-made reference source for individuals and companies seeking an overview of Libya's oil geology and will retain them in the labour-intensive task of sift through hundreds of publications to find the necessary data. The book contains 148 newly drawn figures. Author : Abdulmonem BelaidPublisher:Release Date:2010Common pages:229ISBN : 978383228839 GET BOOKSummary : Author : Richard C. Selley,Stephen A. SonnenbergPublisher:Release date:2014-11-08Commed pages:526ISBN: 0123860326 GET BOOKSummary: This third edition of the oil elements has been fully updated and revised to reflect the wide-ranging changes in the field since the publication of the second edition. This book is useful for primary logistics, geologists and oil engineers in the oil industry who want to expand their knowledge beyond their specialized territory. It is also an excellent introductory text for the university's course in oil geoscience. The geology elements of oil begin with the review of the physical and chemical properties of oil, the methods of reviewing oil exploration and extraction. These methods include drilling, geophysical exploration techniques, wire logging, and underground geological mapping. Describing the temperature and pressure of the underground environment and the hydrodynamics of converging liquids, Selley examines the emergence and migration of oil, reservoir rocks and trapping mechanisms, as well as oil habits in sedimentary basins. The book contains an overview of the composition and formation of tar sands and oil oils, and ends with a brief overview of the prospective risk analysis, reserve assessment, and other economic topics. Updated Second Edition of Complete Reviews Concepts and Methodologies for Oil Exploration and Production Written by Preeminent Petroleum Geologist and Sedimentologist with Decades of Oil Exploration in Remote Corners of the World Contains Information Relating to Geophysicists, Geologists, and Petroleum Engineer Reservoirs Updated Statistics Across Additional Figures to Illustrate Key Points and New Developments New Information On Drilling Activity and Production Methods, Including Crude Oil Direction Drilling - thermal technique, and gas play Added coating 3D seismic interpretation New section on pressure compartments New section on hydrocarbon adsorption and absorption of source rocks Coverage Of Orinoco Heavy Oil Belt Venezuelan Updated Chapter on Unconventional Oil Author: D. Release date: 2000/12/19Total pages:534ISBN: 9780080532462 GET BOOKSummary : The Murzuq Basin is a large intracratonic sag basin located in southwestern Libya. Exploration efforts began in this vast and remote Sahara region as early as 1957, and 60 exploration wells have been drilled so far, resulting in more than 20 discoveries with around 4,000 million barrels of oil at the site. Most discoveries have been made in Ordovician sandstone reservoirs caused by the formation of hot salts from Lower Silurian Tanezzuft. Oil is already produced and exported from the area, but the pool's total hydrocarbon potential is still poorly understood. Recent research — in particular the main discovery and initial development of Giant Elephant Field — has greatly increased interest in the area's potential. Many oil geologists and companies now believe that the basin can also develop into a new major hydrocarbon province, which will contribute significantly to Europe's energy needs in the coming decades. This book presents documents from the conference held at Sebha University - on the eastern margin of the Murzuq Basin - in September 1998. The book continues an ongoing presentation series on the geology of Libya, but the 25 contributions here mainly focus on the Murzuq basin itself and nearby areas. There are still many unresolved issues regarding the exploration of geological and hydrocarbons in these complex desert areas, but the documents here will hopefully provide the first comprehensive overview of an exciting border research region. About half of the documents are directly related to hydrocarbon exploration, and the development of sources of rocks and reservoirs, but also describes a variety of other features, from paleontology and biostratigraphy to ore geology and water resources, covering the entire geological column from Precambrian to holocene. The book concludes, with a bibliography covering all the geological aspects of this complex but highly promising border area. Author : Duncan S. MacGregor, Richard Moody, Daniel D. Clark-LowesPublisher: Release Date:1998Total pages: 442ISBN : GET BOOKSummary: Author: R.E. ChapmanPublisher: Release Date: 2000/04/01Total pages: 414ISBN: 9780080868714 GET BOOKSummary: Petroleum Geology Author : Edward TawadrosPublisher :Release date:2011-11-02Total pages: 930ISBN : 0203130618 BOOK GETSummary : Reference amount for geology in North Africa this volume deals with Egypt, Libya, Algeria, Tunisia and Morocco. In great detail are described geology, tectonic elements, Pan-African shield geology, Phanerozoic geological development and most of the five-country lithostratigraphic units. In addition, petroleum geologist Author: D. WorsleyPublisher: Release Date: 2000-12-19Total pages:534ISBN: 9780080532462 GET BOOKSummary: Murzuq Pool is large in south-western Libya. Exploration efforts began in this vast and remote Sahara region as early as 1957, and 60 exploration wells have been drilled so far, resulting in more than 20 discoveries with around 4,000 million barrels of oil at the site. Most discoveries have been made in Ordovician sandstone reservoirs caused by the formation of hot salts from Lower Silurian Tanezzuft. Oil is already produced and exported from the area, but the pool's total hydrocarbon potential is still poorly understood. Recent research — in particular the main discovery and initial development of Giant Elephant Field — has greatly increased interest in the area's potential. TawadrosPublisher: Release Date: 2000/01/01Total pages: 500ISBN: 9789058093318 GET BOOKSummary: Treating the geology of Egypt and Libya as a single entity, this unquestionably diligent text is divided into six parts covering the following main areas: - 28th Geology Of Pan-African Shield - Egyptian phanerozoic stratigraphy, with an overview of the stratigraphic nomenclature - overview of Libyan stratigraphy - Synthesis of geological development between Egypt and Libya and how it fits into global tectonics and sea-level fluctuations. Bibliographic list of more than 2000 references used in book compilation. Author : Caineng ZouPublisher:Release Date:2012-12-31Total pages:384ISBN : 012397786X GET BOOKSummary : The geology of unconventional petroleum is the first book of its kind to collectively identify, catalog and evaluate research and recovery non-conventional hydrocarbons. Advancements in hydrocarbon technology and oil development systems have recently been made in the exploration of non-conventional hydrocarbons such as shale gas, tight sandstone oil and gas, heavy oil, tar sands, and coal methane, the hottest trend in the oil industry. Detailed case studies act as real-world application templates, making the book's concepts instantly practical and useful for research geologists. The logical and intuitive three-part approach to systematically identifying unconventional hydrocarbons by cataloguing its storage properties and assessing its exploration and regeneration potential can be immediately implemented in an area, anywhere in the world. Provides a detailed assessment of the exploration and recovery potential of full non-conventional hydrocarbons Over 300 illustrations, many full-color capture detailed intricacies and related technological advances in non-traditional hydrocarbon exploration More than 20 case studies and examples from around the world inferred each department and support in applying the main exploration and recovery methods Author : N.APublisher:Release Date:1984Total pages:189ISBN : GET BOOKSummary : Author : Petroleum Exploration Society of LibyaPublisher :Release Date:1967Comd pages:293ISBN : GET BOOKSummary : Author : E. Tawadros, Ezzat TawadrosPublisher: Release Date:2001Coming pages: 468ISBN: 9789058093318 GET BOOKSummary: Discussing important issues related to the geology of Egypt and Libya, this expansive text covers key topics such as the tonconic framework from both countries, an overview of Libya's stragraphy, and the geology of Pan-African shield.
