Body types drawing reference

To me, Sarah D. (Heh.) I think it is very important for artists to vary the types of bodies they draw! Not only does it add visual interest and variety, but different body types can enhance your characters! (Plus it's more realistic when the last time you walked down the street and everyone had the same body type?) I know I have a hard time drawing different bodies, especially with men, so I'm doing this tutorial to teach myself how to do well (I've heard the best way to cement learning something is to teach someone else). So! Bodies! I'm going to use women for this tutorial because I feel like they have more diversity in their bodies. One of the most obvious ways the body differs in their body fat amount. Click here for full size On average, people store fat mostly in basic areas like bust, waist and hips. It is important to remember that people gain and lose weight in different ways, and this is true no matter how fat or skinny gets. However, these are common places people store fat: the face and neck can be a direct indicator of how much fat the rest of the body has; When someone loses or gains weight, it is initially obvious in person. This is possible because the eye (usually) addresses the face in the first place. In addition to differences in the amount of body fat, the bodies vary greatly in proportions. The two main ways in which they differ skeletally and in the distribution of fat. The hip-to-shoulder ratio is skeletal, and someone with wider shoulders may look more grounded or feminine. The ratio of the torso to the legs is also a skeleton. Someone with long legs compared to their torso may look taller than someone of the same height with a long torso, and they may also look thinner. (I say, as I finally get some visual variety all here.) Because hips are also one of the places with the most weight gain in women, large hips can also be a matter of fat distribution. The three main places where the ratio of fat really matters in the bust, waist and hips (body core composition). Although men usually carry weight in the abdomen, the distribution of fat can indeed vary with women. Some women carry more weight in the bust, some in the abdomen and some in the thighs/thighs. Some women carry more weight in two areas like bust and hips, bust and stomach, or abdomen and thighs. Some women do not exhibit a clear bias towards any area and carry weight equally. Click here for full size Taking into account skeletal ratios, fat distribution patterns, huge range of human weight, muscle tone and age, there are endless permutations of body types. It would be a shame if you used one! Oh, and this first image looks very interesting as a GIF. I love the information on where the body gains fat more often and least often. I also like how this post negotiates different lengths of the torso and legs, instead of just changing the weight of the person you are drawing. :D Sorry guys, but I just had to comment because I'm really enthusiastic about this post!! Hehe. adam-ant2! can always use a good linkPocketFullOPokuHobbyist Digital ArtistShadowlovleyHobbyist Digital Artist! can use this for OC gems as soon as I get my new tablet cord thank you!! (The one on the right has the best body type for her/them) KibbitzerProfessional Digital ArtistEdwardXD14wow thanks, your drawings are excellent. I use your drawings as a reference to increase my abilities, I hope that someday make drawings like you'magictalent1499Hobbyist Traditional ArtistEy kibbitzer I'm trying to make my own comic series and I used my size scale reference anatomy u helped me my character with your help list thank I didn't use your character sheet as if you get that that I get what I m say, but I used it to make my character in the idea of kind of way to thank you anywaymagictalent1499Hobbyist Traditional Artist! not to use this in particular, but do get what I say thanks againS-R-LongHobbyist Traditional ArtistDo you have a certain age range for the child? It looks to be about 10, to me, but I'm not sure... Rocket-PenStudent Digital Artisti just figured something out by looking at it thanks so muchBasicVirtualArtHobbyist Digital Artist! would like to know if you get this result spilled away or you use a construction line, and if so, you can show them in a link sheet I think seeing you break the body into shapes can make it easier for some people haha me especially thank you and I love how clean and simple your pieces XDambiambiHobbyist Traditional Artistnekochan19998Helpful useful! Xxx I've never been very good at drawing kids actually I realize now... Well, at least I can go chibi, but it's not quite the same... Xx Any help on that super appreciated!! XxxTokon00For myself drawing a triangle or underwear on a sketch actually helps me figure out how long I need to make a hip. canttellHobbyist Digital Artistthe third ... can't tell if it's a dude or a woman....
