Tempered glass is very durable for all types of shocks and the frame is resistant to a small vibration and can be connected to any 22mm picatinny assembly rail. The set includes two switches: an ice button - pressure started and a second, traditional on/off button. -25% Reduced price □As del piquis The bag of weapons is made of nylon. Thanks to the application of the additional sleeve, the deck without any problem will keep a gun up to 1300mm long. Inside the main chamber there are two additional gun assembly bands. Inside the large front pocket of 620x260mm we will adapt to a machine gun. Gun assembly bands are also in it. -25% Reduced price □Seight rifle space have two main pockets, one larger is 120 cm long and shorter is 93 cm long. It can also be used as a backpack. Longer pocket also have a sleeve inside that can extend gun box for extra 27 cm. -50% for sale! □Preve Video King Arms High Torque Motor -- MEDIUM Type for AEG -- The Bushing Aluminum Shaft-- High Torque Motor-- Box and Final Bell with Ball Bearing Installed-- King Arms Airsoft Motor Pinion Gear (Heat Treatment) -45% Reduced Price □Will Vision Utility Cast Made by High Density Nylon Material. Cord neck closure. Top load main compartment with top flip. 23.00 € On sale! □Consequick watch Madbull PWS Diablo Compensator CQB OD Airsoft, Primary Weapon Systems, Inc. (PWS) is a federally licensed firearms company manufacture €23.00 Reduced price □ From the view of buying the shirt and pants. Ideal for lovers of airsoft and paintball or fishing and hunting. The best pattern camouflage today for the military. Last set of combat uniforms. All products * □ 3V CR1620 1pcs lithium battery. Suitable for most illuminated range or point of view. It is also used for calculators, cameras, watches, computer motherboard and other electronic products. □ Query View Set two engine connector plugs. □ Charger video display battery charger for NI-MH/NI-CD batteries. It has a signaling LED, the color red means charge and the color green - the battery is full. □Slefvision Weight: 10 g Length: 34 mm Accumulator voltage: 3 V Diameter: 16 mm WARNING! Risk of fire and burns. Do not recharge, disassemble, heat above 100C or incinade. Do not mix fresh batteries with used lithium batteries or other types of batteries. □Shoot Battery NIMH 1600mAh 9.6V - form type v [BFIELD5] Accumulator type: NIMH accumulator voltage: 9.6 V Accumulator capacity: 1600 mAh Accumulator type: mini type of accumulator connector: small Tamiya NOTICE! The batteries are only covered by the start of the warranty. □ Battery View Battery Wire Plug Converter - Battery Plug Converter about 125mm long. □Mountvision Weight: 190 g Accumulator type: NIMH Accumulator connector type: small tamiya accumulator cells type: mini accumulator capacity: 1600 mAh Length: 120 mm Width: 20 mm Accumulator voltage: 9.6 V Height: 20 mm WARNING! The batteries are only covered by the start of the warranty. □9.6V Nesting Butterfly/Nunchuck Battery for Electric AEG - 1600 mAh is designed specifically for use with a crane stock. The battery is separated into two halves to fit the crane stock slots around the buffer tube. Notice! The batteries are only covered by the start of the warranty. -20% Reduced price □Consequick see CONNECTOR battery wire BOWL for large aeg airsoft rifles - For remote control and AEG - □Cons displaying X-ASR powder is the world's first 4th generation mustet protected against reverse polarity. It saves space, time and money because the additional regular fuse is no longer needed. Acting as an electronic watch, X-ASR improves the safety and durability of your AEG by coating according to and self-testing with 2 LED. Although designed for up to M120 docks, in full auto... □Conseal a very intuitive and easy to use smartcharger view for GFC Energy. It can be used to charge NIMH batteries. The uploader is supplied with a cell count autodetection system. □Consear weight: 5 g IP ALARM code □Cons view video This package contains a 9.6v NIMH nunchuck battery and smart charger. The nunchuck configuration battery fits most airsoft rifles, and the smart charger will charge quickly and keep the battery recharged. Both have small tamiya type plugs that are common to most airsoft rifles as well. Please note: battery & amp; amp; charger may be different (no... □ PicoAEB jet view is the smallest, 3rd generation mostlie with brake It can work with Li-Poly batteries of 14.8V. The system can be installed in each AEG. It can work with smaller ASG replicas. □ Gradually 7.2V 500mAh. Battery for airsoft electric pistols such as G18C, CZ99 and STI Classic, also fits CYMA electric pistols. CM030, CM121, CM122, CM123, CM125, CM126 WARNING! The batteries are only through the start of the guarantee. □ Since then, see Plug and socket. Large contact surface. Heat resistant polymer. Kept in place with spring tension. □Seal search has 8 functions. Thanks to its special coating, it is resistant to atmospheric conditions (Military Specification MIL-V-173C). Battery protection supports: Li-Po 7.4V / 11.1V / 14.8V. You can also disable the protection and use other batteries. □ Displays 1.5V AG13/LR44 2pcs Alkaline Battery Pack. Suitable for most illuminated range or point of view. It is also used for calculators, cameras, watches, computer motherboard and other electronic products. □ Display Designed for NIMH battery packs. Wide range of working voltage of 100V - 240V. PRODUCT DETAILS: * Working voltage: 100V - 240V (50Hz/60Hz) * Charging voltage: DC12V 0.3A * NIMH WARNING batteries only! Charges are only covered by the start of the warranty. □Sequick having a good airsoft battery of weapons is essential to get the best performance from your AEG. Buying quality airsoft batteries will ensure they last longer, provide a faster trigger response as well as increase the rate of fire of your electric airsoft gun. A high quality charger is also a faster and more reliable loading necessity. Having a perfect battery charge each time you charge it will help provide better performance and longer battery life. To find out which battery is best for your gun check out our AEG Battery Information. The most common airsoft weapons on the market today are battery-powered AEGs (Airsoft Electric Guns). Here you can find the exact battery to match your weapon and desired performance, along with all the necessary accessories and maintenance components. ROF (Fire Rate) and overall performance and durability of an AEG (Airsoft Electric Gun) have a direct relationship to battery power and capacity. If you want to upgrade AEG, start with a better battery. We recommend upgrading the entire 8.4V low-performance battery and cheap wall chargers commonly included with Chinese AEG rifles made for optimized performance and durability. We recommend a minimum of matrix or equivalent 8.4V battery packs with at least 1400mAh or a higher mAh rating for all AEG rifles. A 9.6V NIMH battery is recommended to power an AEG with an FPS output rating of more than 350 with the exception of LiPoly batteries, where a LiPoly 7.4V battery can have a power equivalent to a 9.6V NIMH package. Some AEGs equipped with a high torque engine can allow a lower power battery pack to be used at the expense of ROF (fire speed). The Chargers they are highly recommended to provide longevity for battery life and a better gaming experience. Smart chargers will stop charging when the battery reaches capacity and charges the battery in a fraction of a normal charger's time. Regular/cheap battery chargers don't when the battery reaches the maximum capacity and does not stop charging on its own, so they require manual control of the battery temperature and an accurate calculation of the charging time after the high battery. Finding the balance between ROF (rate of fire) and FPS (feet per second) of your rifle is critical. Expect less ROF and greater wear as the FPS increases. Expect to use a higher power battery as the FPS increases to avoid blocking potential gears. Avoid using batteries that are not suitable for your weapon, or run lower-powered batteries. There are plenty of brands and models to choose from in today's market. We only have the brands and models that will give you the best experience in terms of performance, reliability and warranty / repair support. All AEG will require the use of a package of rechargeable batteries to power the gearbox or mechbox. Inside you will find an electric motor that turns a set of gears that are pulled back and releases a piston that generates the air pressure to fire the BB. The AEG can be modified with different engines, gear relations, pistons and cylinder parts to drastically improve performance in any direction you choose. All high-quality AEGs will have an adjustable jump unit to provide backspin to the BB and generate lift, increasing their weapon range dramatically. The inner barrel and upward jumping unit can be upgraded for even more accuracy and scope. The most common would be OEGs that are select fire, meaning they can fire fully automatic as well as semi automatic. Some AEGs are semi-automatic only and are typically used in a Designated Marksman Rifle (DMR) function. Double check the description of the weapon you are buying as many higher end guns DO NOT include a battery or charger. You can add a battery and charger to the product page at a reduced price. Normally you'll want about 2-3 batteries for an airsoft day, but the number of batteries needed for an airsoft day is dictated by the number of rounds fired. If you have any questions about any of the weapons we offer, please call us at 888-316-7816 or email us at Sales@Foxairsoft.com Video Q & A Q: Is it better to get an electric gun or a sniper rifle? A: That depends on the type of player you are. We recommend that most players start with an automatic electric gun (AEG). These are a lot of fun and are much easier to use in the field than a sniper rifle Q: Do the weapons come with a battery and charger? A: This depends on the weapon model. Some of the entry-level weapons will include it, while high-end weapons will not. It is important to bear in mind that most of the and chargers that come with guns are not high quality. That's why we recommend that you pick up a battery and a quality charger. Click here to see quality batteries and smart chargers. Q: At what speed do electric guns fire? A: This depends on the weapon – the speed measurements on an airsoft gun are with a .20g BB. Don't be fooled by the speeds measured by lighter weight BBs. Most rifles fire between 350 - 400 fps out of the box. These speeds have become standard limitations in many fields. Be sure to check your local field to make sure the rifle meets the speed requirements. Requirements.
