No-CD patches in particular are notorious for missing video and audio data on various patches and even a few sectors on certain CD/DVD versions. Because the extra tracks on the No-CD/No-DVD patch are different from the original release, it is often necessary to apply the patch to the release itself before installing it in order to get the extra tracks to work. For most other cases, when the patch is not functioning properly, an error will occur at some point. The most common problems getting a patch to function properly is that either the main image is not loaded, or that the main image is loaded, but the patch itself is not fully written and has errors. In order to use the VN-K Patching Kit, you must have all of the following: - *2 Gb Hard Drive space

available on C:. Any remaining space on C: will be left clear for use by the VM. - A FAT16 formatted hard drive. - At least 64 Mb RAM on the computer that is used for patching. This amount of memory is recommended for use with VN-K. - The vnk_patch executable needs to be installed onto the computer that is used for patching. You will also need to have a copy of the VN-K patching software. - *A copy of the VN-K patching software (this is available as a free download from the VN-K Support group. If you are downloading a patch off of CD, you can open the CD in any program that is capable of reading it, such as Nero 6.* - *VN-K installed on the computer that is used for patching. - *A connection to the internet that allows you to transfer files. - *A copy of the game that you wish to patch. - *The name of the game that you wish to patch - *A copy of the patch that you wish to create. - *A copy of the original release. - *A working copy of the game, preferably with another copy so you do not have to patch the same game twice. - *A legal copy of the original game. - *A USB-drive that is at least 2 Gb in size
