Karen Jensen's screenplay focuses on a friendship that has been shed between a young girl with a vivid imagination and a person with a developmental disability. The plot, which occurred in the mid-1960s, focuses on 10-year-old Harriet Frankovich, a lonely outcast living with her mother and older sister Gwen in a dilapidated North Carolina motel, with tiffany-shaped cabins her mother received as part of her divorce settlement. Harriet has a strong desire to escape her boring existence through any of several creative ways - from a magic carpet she tries to fly off the roof, aboard a flying saucer she anxiously awaits at school, through a tunnel she dug into China, or by attaching helium-filled balloons to a lawn chair. Ms. Frankowitz is a bitter alcoholic with a tendency to drive on the wrong side of the road, while the promiscan Gwen entertains a series of men in empty rooms. Lya Seruth has a terminal illness on her way to an institution where she intends to admit her mentally challenged son Ricky when their vehicle breaks down near the motel, and I'm staying there while they wait to be repaired. Mrs. Frankowitz was killed in a car accident, and Harriet discovers that John is her birth mother. The distressed girl and her new friend fled and set up home in an abandoned trailer hidden under dense seas in the woods. When Ricky becomes Harriet had to turn to him for medical help. Once he recovers, his mother goes out with him to complete their repaid journey, leaving Gwen and Harriet to learn to interact in their new mother-daughter roles. The production notes that the film was shot in Cherokee, North Carolina. The soundtrack features One Great Love by Patty Griffin, The Last Train to Monkees' Clarksville, Sergio Mendez and Brazil's Mas Que Nada '66, Ikko Ikko's Dixie Cups, Cal Tejder Soul Sauce, Tommy James's Crimson and Clutter and Sandal, Rabbi Alpert's Lobo, Carlos Santana's Samba Mouth Tee and Stefanof's Magic Carpet Ride. The film premiered at the Giponi Festival in July 1997. The director has stared Evan Rachel Wood as Harriet Frankovich Kevin Bacon as Ricky Scher Mary Stuart Masterson as Gwen Frankovich Marian Saldes as Lea Shweth Cathy Moriarty as Ms. Frankovich critical of his New York Times review, Stephen Holden said the film doesn't catch the heartstrings and a belly in a aggressively pumped ballad. Actually, it could do with a little more heart. Part of the problem is Mrs. Wood's Harriet. The young actress is photogenic and radiant, but her performance is muted and monochromatic... With no canon appearance at its center, digging into China goes the same way as Harriet's balloon escape. It gets stuck in the trees. [1] Peter Stack of the San Francisco Chronicle called it cloying, a superficial story [that] ended up being forced and predictable... The image of Ricky's bacon, which is crippled by a nervous disease that distorts his body and face, ranges from fitting to almost touching. But it's a desperate story, a thriller that makes the film a chore to watch... [Her] saving grace is that it's lush and visually attractive. [2] In the San Francisco Examiner, Walter Addiego described it as an uncomfortable mixture of after-school special and art house project and good intentions but ultimately sentimental and added, it nonetheless offers some nice good performances, low-profile observations about the predica state of strangers... Given the material, Hutton should be commended. There are enough things in the dig into China to offer real managerial talent, and hopefully he can build on that fund. [3] Awards and nominations Kevin Bacon was named best actor at the Jiphony Film Festival, and the film won the Children's Jury Prize at the Chicago International Film Festival. (Photo by bogdanhoda/shutterstock.com) Dig into China this favorite pastime for American children, not to Classic parental joke. Any child with you in hand is probably asked if they are digging into China, told to stop trying to dig into China, or perhaps assigned to the impossible task by an exhausted (or devious) caregiver. In August 1937, the New York Times published a cute two-sentence story with the headline Boys Uncovering Buried Treasure. Here's the whole story: Rochester, N.N., six young children determined to dig into China through Homer Hood's backyard, hit buried treasure. It was a tiny metal box full of old coins and small deductions, sailor buttons and a gift necklace. How Homer Hood felt about the canal in his backyard or if he was entitled to loot was lost to time. But where exactly did this fantasy idea come from? Henry David Theoro, who wrote about digging for China in Walden. (Photo by Public Space/Commons) The first notable mention of the phrase comes in the mid-19th century. In 1854, Henry David Theoro wrote in Walden: As for your tall towers and monuments, there was a crazy guy in town who pledged to dig in China, and he got that far that, as he said, he heard the Chinese pots and floors noisy; But I think I won't be going out through mine to admire the hole he made. Less than two decades later, a fictional depiction of engineers unfolded as begreachers talked about the expected tunnel to China that was to be built under the sea and lined with china, a rather beautiful if geophysically impossible picture. By 1899, the idea had turned it into a religious education. A song called The Three Little Miners, documenting the efforts of a group of children to dig through a beach to China, even made it a Sunday school primer: three small miners set one morning/dig for the land of China. / With kindness and courage they marched / with seams and coels for collecting pack load. As television grows in popularity, so do references to the great excavation. There are jokes about digging into China in Looney Tunes cartoons, the Simpsons and waffle commercials. Oscar and Sesame Street TV dig a hole for China in China's Big Bird. (TVTropes.org offers a comprehensive list of such examples.) In 1987, the National Institute of Dance of New York invited 56 schoolchildren from China to join an intercultural dance. Subject? Dig a hole for China. And all things have a Kevin Bacon connection – he starred in a 1997 film with Evan Rachel Wood called Dig for China. The film Dig for China, starring Kevin Bacon. (Photo by imdb.com) but despite the cultural admnications of the phrase, its exact origins are dark. It is not usually documented in dictionaries of fangs, euphemisms or slang, though in 1938 a writer recorded A specific example in a paper on auto mechanic lympho published in the journal American Speech. According to this story, in mechanic talk, digging into China referred to sewing a cylinder or dismantling an engine. (Also, a butt thug was a rough car. In geography, antipode describes the point that completely resists another point in the world. and China is not the Antipode of the U.S. Anyone who wants to take on a journey to dig from a warden to the other side of the earth should bring a raft, because they will probably emerge in the Indian Ocean. Click somewhere on the United States in this handy online antipode map and you'll get the message to watch out for sharks! (China's real antipodes are Argentina and Chile.) Antipodes are something people have thought about over the years, and one person has even started a project that encouraged people around the world to make earth sandwiches using antipodes - depositing slices of bread on earth simultaneously from parallel antipodes. The Antipodes website will tell you which point is completely opposite on the globe to your location. (Photo by antipodesmap.com) there is, of course, another major hurdle that stands in the way of digging a hole for China or any other region: Earth. If someone were to penetrate the thousands of miles of rock that make up its layers, there remains the issue of surviving the fiery, ingring core. Even relatively modest attempts to penetrate the Earth's crust have failed. In 1961, a group funded in part by the National Science Foundation understood Project Mull, an effort to drill through the Earth's crust to Morovich's lack of shortening - the space between the crust and the mantle. (His cute nickname is Moo). After unprecedented drilling 201 meters across the coast of Guadalupe Island, Mexico, the project was abandoned before Moo was reached. Project Mull in Action, 1961. From left, UCSS 1 near Guadalupe Island, Mexico, and right, one of six sunken buoys used for dynamic positioning. (Photo by Public Space/Wikimedia Commons) So where is everyone from the idea that China is right on the other side of the world from the world? Jeffrey Nonenberg, a writer and professor of linguistics at the University of California, Berkeley, told Atlas Obscura in an e-mail that the idea was an orientalist cast with China and its inhabitants described as a polar opposite of the West in connection and culture. Indeed, the word antipode is also used to describe anything that is the exact opposite or the opposite. Despite poor geography and orientalist sentiment, the adage persists, perhaps because it sounds Catchy and more appealing than a hole in the Indian Ocean. Ocean.
