For our example here, we are going to create a PDF from a single text file. It's not something you'll probably do, but it's an easy way to show the process using the default Windows Windows. It will look a little different depending on the application from which you are typing, but the process is pretty much the same no matter what the source is. Start by selecting the Print team in any app you use. Next, you'll change the printer. Again, this is how it looks in the default Windows Print window. It will look different in different applications, but the option will still be there. When you choose a PDF printer, go ahead and print the document. If you have a bunch of images (or other documents) that you would like to combine into a single PDF document, you can do so directly from File Explorer. Choose all the files you want to combine, click the right button on any of them, and then select the Print command from the context menu. Note: The order in which the images appear in File Explorer is the order they will display in the PDF. If you want them in a different order, rename the images before you combine them. Then make sure that Microsoft Print To PDF is selected from the list of available printers, and then click the Print button to save the PDF on the hard drive. Create a PDF from an existing Word document If you have Microsoft Word and you want to convert it to a PDF, you'd rather do it from Word than with a built-in Windows pdf printer, because Word better preserves the layout and formatting of the document during conversion. With the Word open document, click the File menu on the feed. On the sidebar that opens, click on the Save as command. That's it now, what you need to do is give the file a name, select a PDF from the drop-off menu, and then click Save.
