Wood ceiling tile shower

Create a rustic retreat in your bathroom with a decorating style that brings nature inside. For a rustic bathroom ceiling design, choose wood-looking ceiling planks in interperate or pine. For a more spacious feel, light greys or maple are beautiful choices. If cottage style is more your design preference, try a white board or maple ceiling. The beaded frame, with its narrow planks and grooves, adds charm and a textural quality to any bathroom ceiling. White planks refresh a space as they add visual interest up. Please note that the boards should only be installed in a bath without showers/bathtubs. Excessive humidity caused by water and steam can cause the planks to deform. For a bathroom that brings your design style to all four corners of the room, install painted wooden ceiling boards on the wall as wainscoting or a stainless steel metal backsplash behind the sink. IMPORTANT: Ceiling and wall systems cannot be used in outdoor applications, or in indoor locations where standing water is present due to high humidity, or where moisture will come into direct contact with the ceiling or wall- think showers and bathtubs. Be sure to follow the installation and warranty guidelines. Remodeling a bathroom can be quite expensive. The most complicated part of reformers of bathrooms is that they may require various renovations over the years. As owners, we spend a lot of time inside our bathrooms (some more than others). This means that the design within your sanctuary and oasis must be durable and able to withstand moisture, heat and other threats that can damage materials at any time. One place that needs attention in the bathrooms (which is often overlooked) is the ceiling. You may not spend time looking up while in the bathroom, but having a polished and finished ceiling can make or break the overall feel of the room almost instantly. There are some unique (and inexpensive) ways to make over your bathroom ceiling that you may never have heard of before. Fortunately for you, we have established the five cheapest ways to give a makeover on the ceiling of your bathroom! Fiberglass In the bathroom, one of the most common materials used for anything is fiberglass. Many home builders use fiberglass because it is cheap and water resistant. One of the things you can do with fiberglass on the bathroom ceiling is to use it to create a shower standing from top to bottom. There are pre-cut fiberglass materials that will allow you to easily and quickly install fiberglass throughout your foot shower. This can prevent the bathroom ceiling from having water damage over the years, as it will be protected. Tile Nothing says polished and refined as tile bathroom. From floor to ceiling, tile is a great option for any bathroom. The best part about the tile is that it is waterproof and easy to clean. With intricate and interesting Work on the tiles themselves, you can bring life to the ceiling of your bathroom with tiles. For the tile to be effective on the bathroom ceiling (if used in the shower), you must ensure that you use waterproof materials to help seal the joints. You can also wash your entire bathroom —from the suspended ceiling to the floor—to give you an industrial feel. Flooring/Planking This is probably not a word you hear often in the design world if you are not a home builder or interior designer. The coating is a waterproof material that is usually made of PVC panels. It is easy to install and will last a long time. As the ceiling of a bathroom also receives moisture through the evaporation of water, having a material that is water resistant in the bathroom ceiling is very important because it eliminates mold growth. Paint If you do not oppose more frequent maintenance and more trips to the hardware store, painting the bathroom ceiling can also work. It is not expensive and requires very few tools to do the job. However, you will want to make sure that you have durable paint for the ceiling of your bathroom. The water and steam in the shower will make having a ceiling painted the bathroom ceiling the hardest piece for the painted puzzle — you can end up with and in no time and even start to see the walls peeling. It's not that it can't be done and it will certainly work in a difficult situation. Moisture resistant drywall Also known in the construction world as greenboard, moisture resistant drywall is another inexpensive option for your bathroom ceiling. It is important that you look for a water resistant dry wall to the ceiling of your bathroom because of the water and steam that evaporates into the air on a constant basis. You could paint the dry wall with a water resistant paint color to give it a more polished look, too. Ceiling tiles If you want something out of the box and more in line with unique designs, metal ceiling tiles can do the trick to your bathroom ceiling. What makes metal ceiling tiles so large for a bathroom ceiling is that they are easy to clean and clean and are stain resistant. They will not be bothered by the water evaporating into the air and rising to its surface. Metal ceiling tiles can come in a variety of materials such as tin, aluminum and copper. Whatever style you are aiming at with your bathroom, metal ceiling tiles can transform the bathroom ceiling as well as the entire space! Professional Tips Getting a bathroom makeover is no easy task. However, knowing the right tools and tricks to help make the process smoother is a must. 1. Start with The End in Mind This is a great tip, no matter what area of your home you are remodeling, because it requires you to have a clear view before on their journey of transformation. Knowing what style of bathroom you want before you start will help you choose the right one to work. Doing on the bathroom ceiling will require a little elbow grease, so make sure you have the right tools to make it right. 2. Consult an expert This tip does not mean that you have to hire the specialist to do the installation for you (unless you want to, of course). Call an expert to give you an estimate of how they would do the job and how much it would cost. Let them tell you what needs to be done first before you start cutting the ceiling or bathroom walls. Save time and energy by consulting an expert first before taking on any house renovation project! 3. Source your materials If you want to do bathroom ceiling makeover without killing your bank account, you have to provide your materials first. Look around local hardware stores, chain hardware stores, and online for materials that meet your needs, both aesthetically and financially. You can find great alternatives to some materials such as metal ceiling tiles online. Check out our alternatives here to give you an edge in your search. 4. Don't skimp It's easy to get involved in the fact that you want to save money on bathroom ceiling reform. We don't blame you. The truth is, however, if there is one place you need to spend a little more to do the job properly, it would be with the bathroom. Getting cheaper materials can mean replacing them in the very near future, which will only cost you more money. If you use cheap materials to repair a false ceiling or fix a hole with glue, it will probably start to fail in no time. Idea Library Shop for Ceiling Tiles Conventional wisdom is that tile is ideal for bathroom surfaces. We see tiles everywhere, from the bathroom to the subway, to everybody's house. I love tiles, but just because it's so popular doesn't mean we have to design with it. And tile and grout are not as waterproof as you might think and are not needed for appearance, durability or cleanliness in wet areas like kitchens and bathrooms. In fact, you can do amazing things with wood, even in the bathroom. What you feel, sounds and even reflects the light is wonderful. It also offers color and depth, and can soften the look of hard ceramic finishes. Although wood is a durable choice for bathroom floors, it is also fantastic on the ceiling. It adds a sense of natural warmth in a space where, well, most of us are au naturel. Yes, this ceiling is above a shower. You can imagine the potential moisture problems. I always recommend using a fan in the bathroom, but adding a second barrier between the steam rising from the shower and what's behind the ceiling can be smart here. I recommend sealing the wooden surface with cooked and/or urethane. I also recommend sheeting ceiling joists with 15 pound tar paper (the black paper you see under roof tiles) before installing the wood. Tar tar paper water resistant and will keep the moisture that does it through the ceiling (not much, if any) inside the room. Moisture will evaporate back into the room and dry with the rest of the air, especially if you are using planks instead of a tongue and groove material. The wood on an accent wall — in this case, beveled sidings — softens and adds texture. Moisture is always a concern in a humid area, and the usual bathroom flooring is semigloss ink. When it comes to wood, I like the texture to be the star, so I prime the base coat with oil (it stinks, then make it out) and make sure that the final grains and back are coated to completely seal the wood. Installing wood is often easy, faster and cleaner than sanding the dry wall. When you are remodeling a bathroom, there are many materials that you can use for walls that will help combat ever-present moisture. Water-resistant drywall (often called green board) and cement board are popular, but they are not needed or more durable than natural soft wood planks like oriental white pine. The bare wood will stain, but covering it with a water-based urethane will help keep all this natural wood grain vibrant. And having wooden cabinets of different colors and storage is a nice touch, with clean lines and horizontal drywall can not touch. Browse thousands of bathroom so rests recommend the stock of tongue and groove, unlike the planks, to create a continuous barrier to minimize moisture migration to the walls. Think creatively. Wood is used on decks and docks, where it is constantly moving between wet and dry (and getting snowy). So why not use it on the shower floor or in another bathroom area? This pallet floor is customized detailed for this shower mount. An easily customizable pallet constructed from any number of widely available logging species - pine, cedar, Douglas fir - could be designed for a standard shower with a spilled and sealed shower pan in place of tiles. Or it could cover tiles, which is my preference, because I find it easier to clean. I also like the idea of creating a simpler element inspired by this design: a wooden bath mat. Wood is easy to seal and clean with basic household detergents, and is much less slippery than glazed tile. See more

wooden shower floorUsinging wood in the bathroom allows a mix of materials to create depth and warmth in different materials and styles. This concrete wall may have appeared cold and heartless if it weren't for the high beams and the roof in V-joint decking above. Scale this feature down to convey the same effect in a space Consider wood wall panels for a rustic rustic look
