The question is in the stray on the photo number 5. Is she even present in the original? If there is then how? I doubt that the Japoshkas made a note which is incomprehensible as it becomes in the filter shaft (incomprehensible bend of photo number 6) Edited: 02.07.2011, zyXEL Good Night!and is there no accidental back of the passenger? Hi all! The issue of maintenance of the air filter 250K1. Took a used device, decided to serve the air filter ... Everything is basically clear, but look at the photo number 6, how so? Is that the way it should be? If not, why this approid in photo number 5 is like everything is in place, just why it floated.Edited: 02.07.2011, Bel Attached images Open in the gallery Where to download the manual on suzuki burgman 250 (2001-2002)? I'll try to see it at home today, and for now I've googled it with the phrase Burgman 250 pdf. There are a few manuals, but I don't remember yours. end, the near-cloud No.6 is inserted into the middle of the filter box or is it put on its top end? Yes, I have soaked the special impregnation for air filters, although the manual says that it is necessary to impregnate with oil motor 10W40 . I understand that the Japoshkas expected that the plastic filter would come into contact with oil and stabbed plastic oil - benzo resistant. inserted into the middle of the filter case close to the foam to prevent the passage of air between the hull and the edge of the foam, but there should be no hump as you have in the photo 6 New original parts on Suzuki Burgman / SkyWave AN250, AN400, AN650 IN THE WORLD!!! Паэборка Suzuki Burgman / SkyWave AN250, AN400. www.vk.com/burgman_shop www.burgman-shop.com.ua I have one-in-one just like in the photo - with bends and humps. I used to think it was my temperature, and it's not normal. Now there are doubts - maybe it is intended? you've been told that the bend is due to the effects of gasoline fumes. The part of our production would have deteriorated in the first year of operation or when installed at the plant))) the part of the Yaposhkin has been deformed over the years and for Europeans I think it is not a problem to change it on the official service of Suzuki where 95% of owners of this equipment are serviced. and in general do not consider the japoss gods who in principle can not have sides! I'm selling B.U. parts to That's strange, why this near-wood has already increased in size in two cases, and please notice only on one side. Here's how to explain it? That's weird, how do you explain it? Such a problem inflated here Went to the Suzuki salon and ordered a new one. The price is about 80gn. Such a problem inflated here Went to the Suzuki salon and ordered a new one. The price is about 80gn. Sashik! The question is not where to buy and how much it costs, but what affected this defect and how to avoid it Yes, and if you raised the issue of buying a new slip please number on the catalog of this stray, and then I can not find it (number). Thank you in advance. Today I changed the belt to my AN400X. Put the belt from the new model - not F03, and F10. I drove about 200 km. With the old belt when touched from the place shook, as if you start with the third gear - now there is no such thing. Smooth, soft acceleration. At 90 km/h on hearing the engine revs lower than before, less vibrations. In short, so far satisfied. I think to restore (to weld the pads), however, I haven't decided to finish - I don't know what ferodo to cook and how to sharpen it. Today's 90 km/h track was 3.4 litres of OCCO Pulls 95. A comrade in the same mode on the zongshen zS250-5 (two-cylinder V) has a consumption of 2.8 liters of OKCO 92. If I'm not mistaken, the new belt sample is longer, a little different angle of the corners... The question is not where to buy and how much it costs, but what affected this defect and how to avoid it I would have your problems Yes, and if you raised the issue of buying a new prompt please number on the catalog of this stray, and then I can not find it (number) Thank you in advance. Holder, filter 13791-14F00-000 Approximately 70gn should be, and that which is for 80gn, Not your model. Two days ago called the Suzuki salon, so there recently something has changed and now until you name the number of the frame with you and do not want to talk, and what you call the number of the Skyway (intra-Japanese market), then we say for such do not carry. In short, they've given them 17-digit code from Burgman.
