Other fuel-related resources are natural gas and oil. There are a number of metal resources that include chromite, bauxite, iron ore, titanium ore, manganese and mica. Other natural resources include diamonds, limestone and arable land. India has a number of natural disasters that include droughts, severe thunderstorms, flash floods and earthquakes, as well as widespread and devastating flooding from monsoon rains. Environmental problems for India are numerous. These include deforestation, soil erosion, overgrazing and desertification. The country has a huge and growing population, which is overworked by natural resources. Tap water is not drinking throughout the country, and there is water pollution from the runoff of agricultural pesticides and untreated sewage. In addition, India has air pollution from industrial runoff and vehicle emissions.
