The full version of the Dell Backup and Recovery is available for \$149.99. Structural and Functional Effects

of Structural Alignment of Rod-Like Nanoparticles. Alignment of rod-like nanostructures with high aspect ratios can substantially modify their optical, mechanical, electrical, and catalytic properties. Here, we report the synthesis and study of structural and electrical properties of aligned nanostructures of silicon (Si), zinc (Zn), and titanium (Ti) oxides, which exhibit thermal growth and self-assembly at relatively low temperatures. The ability of Si, Zn, and Ti nanoparticles to be produced and retained as aligned rods upon thermal growth 520fdb1ae7
