By Edmund Lukavics Updated September 22, 2017 Minecraft is a self-designed sandbox PC game. In Minecraft, you are inside a hostile game world where your primary means of survival is the ability to build shelter and items from resources derived from the game world. By breaking the world, players can create buildings, weapons, armor and an assortment of interactive and non-interactive objects. Building an entire city worth of structures can be achieved by a patient and a dedicated Minecraft player, especially when the process is properly planned. Plan and create a city. Building your buildings out of stone, wood or rarer material will affect your foundation choice and construction strategy. Find the right foundation point for a city type. When building wooden structures, choose a place with a large stock of trees. For the stone, find a mountain. Rare materials are usually deep in the ground. Build a simple building to act as a base, and create an area of defense around it. At night, the game world becomes populated by various hostile creatures, and staying inside a closed structure is your main defense. Build the foundation of the planned buildings. This will allow you to have a visual link regarding the location of the city as you build the structure up. Collect the appropriate resource blocks and create the rest of the buildings. Don't be afraid to deconstruct the unit if you decide you don't like it. You'll be able to reuse the resources placed in it. Beware of lava and fire when building wooden structures, as they will catch fire and burn. Never travel at night or underground without weapons and armor; If the monster kills you, you will fall off all the resources that you carried.
