April 1970. A few months after the human arrival on the moon, NASA organizes another journey, Apollo XIII, manned by James Lovell (Tom Hanks), Jack Swigert (Kevin Bacon) and Fred Hayes (Bill Paxton). Shortly after the start of their journey, the explosion forces the three to fight, with the help of their comrades in Huton, to return to Earth as the whole world closely follows the development of a mission that seems to be moving towards tragedy. Apollo XIII, directed by veteran Ron Howard, is part of this American cinematic modality (and which in the 1990s worked profusely), consisting of a review of the history of the country on the one hand, and, on the other, an impressive chosen moment. Apollo XIII is a good example: Howard builds a film between the human drama of the ship's crew and their projection in their families. The film is a free adaptation of the novel The Lost Moon, written by Jim Lovell (commander of the Apollo 13 mission) and Jeffrey Kluger. It was adapted by William Broyles Jr. and Al Rainert, directed by Ron Howard and starring Tom Hanks as Jim Lovell. The film contains one of the most famous phrases of cinema: Houston, we have a problem included as No 50 for 100 years AFI ... 100 sentences, a list of the most famous phrases in cinema according to the American Film Institute. The film was nominated for numerous awards, highlighting nine Academy Award nominations, eventually winning Best Editing and Best Sound. The film was re-released in 2002 for IMAX, with a 24-minute cut. In 2005 a special edition DVD was released for the tenth anniversary, this edition aims to combine the best of the film version and IMAX, as well as numerous additional services and comments. The argument james Lovell, Jack Swigert and Fred Hayes were NASA will take part in the next American lunar mission Apollo 13. When an unexpected explosion hits a tiny spacecraft thousands of miles from Earth, the whole world will be watching three astronauts and their struggle to return to Earth. The story is told from the perspective of James A. Lovell, recounting the efforts of him and two other astronauts lost in space, while hundreds of people at NASA (especially the head of the mission, Gene Krantz) and in government move against the clock to try to get the three astronauts to Earth healthy. Criticism of the film has been praised for being a very accurate dramatization of the real fact that occurred during the space race. It shows the challenging teamwork and calmness and ingenuity when it comes to dealing with what could be an unprecedented disaster in space travel. Which best sums up the film's determination and the efforts of hundreds of people on Earth to bring back astronauts safely, in the phrase of Gene Crunch: We have never lost an American in space, and we are sure as hell exists that no one will be lost before my eyes. Failure is not an option. (In fact, this phrase was not said by Krantz, but he loved it so much that he used it as the title of his memoir.) Also, Ken Mattingly's team spirit (Gary Sinise) when at the time when he's working on a simulator offer a break, answering: My teammates there aren't resting, so I'm not the Astronaut who commanded the real mission, James A. Lovell, playing a small role in the final minutes of the film, playing the captain of an aircraft carrier that takes astronauts. Another color note is given by the actress who plays Lovell's mother, Gene Speegle Howard, the mother of director Ron Howard in real life. The film shows a walkman who is out of time as the first of its kind appeared in 1979.
