(Pocket-lint) - We doubt that Gene Luke Pickard ever had to ask the computer to turn on the heating in the facility, but Honeywell is about to make that possible for anyone to be a home captain with a new thermostat that you can control with your voice. The voice-controlled thermostat, in the next couple of weeks in the UK, will allow you to just say hello to the thermostat before barking further orders like making it warmer or making it much cooler. The company's new showstopper device works by studying the voice of owners and reacting accordingly, listening to key commands from anywhere in the room, just as Android users already do with OK, Google. These commands range from standard temperature control to asking For Honeywell's thermostat for weather, all of which will be read back to you. Behind the scenes, the thermostat refers to the company's Honeywell Total Connect Comfort app. And because the platform is learning through crowd sources, it needs to get smarter over time with the addition of more commands based on its interaction with homeowners. We want to explore new ways for people to interact with their home, and this is a natural progression, said Jeremy Peterson, GM of the EMEA Honeywell Home Comfort and Energy Systems Division. We want to explore new ways for people to interact with their home, and this is a natural progression, said Jeremy Peterson, GM of the EMEA Honeywell Home Comfort and Energy Systems region Division. In a reality, it's probably about a number of things like offering tech-savvy users already used to talking on their phone the opportunity to talk their heating as well. It also shows that Honeywell is able to do more than just make a thermostat that is controlled through the app. The thermostat was downgraded to Pocket-lint before launch, and the surface looks like other devices from the company's large range of controllers. Like the personal assistants on our phones, or Xbox One with Kinect, the thermostat has a list of prescribed commands and making sure you say that these commands in the right order will be important. We made a mistake, and the thermostat did nothing. Where the real problem will be, and the one we aim to try, how well the thermostat will work in the home environment through a noisy room where you might as well have a TV. With your smartphone talking directly with the microphone in front of you, here you have to talk to the microphone, perhaps on the other side of the room, and that will be a real problem for Honeywell. Get it right, and it's likely that eventually in the future we'll all be talking to our electronics in our house, getting it wrong, however, and it will leave customers frustrated by pulling their hair, effing and dazzling on their heating ignoring them. Honeywell Voice Controlled Thermostat priced from 229 pounds and is available to order in the UK via via Honeywell installation network. Written by Stuart Miles, koinseb/Stock/Getty Images Plus/Getty Images For honeywell thermostat program, you need to set the current time and date along with the desired temperature for future days. It is important to understand that once the thermostat is programmed, the heating and cooling system is automatically activated in response to programmed requirements. The first step to programming the programmable Honeywell thermostat is to press the clock button and use the directional arrow to advance at the right time of day and then press done, which is located on the bottom right side of the device. Then click the system button and set the day of the week. To set a date, click on the central blank button at the bottom of the screen, and then select the system button before displaying the desired function. For example, click the system button three times to use the automatic programming feature. Use the schedule button and then the editing button, both of which are located at the bottom of the screen, to change settings for each day. Select the day of the week that needs to be edited, and press the wake-up button, along with the directional arrow, to set the desired temperature for that particular day of the week.
