I use it for more than a year and it is not broke. However today when I switched it on a message box appeared saying you have about 60 days to buy a new music player. So what should I do to fix this? This message appeared only on the fourth time it switched on. A: "60 days" and "60 days" in your English? It is 60 days (the default is 60 seconds) with the exact number of days, i.e. 31,53 or 63 or 77 or (for a year) 361 or 3361 days. Here's a link to a Microsoft KB about the music player. Creatine Kinase-MB: a sensitive biochemical marker for myocardial ischaemia during the acute phase of myocardial infarction. The evaluation of myocardial infarction (MI) is traditionally based on clinical symptoms, electrocardiogram (ECG) and cardiac enzymes. To determine the value of creatine kinase-MB (CK-MB) during the acute phase of MI, the CK-MB levels were measured in 210 patients with MI. The maximal CK-MB level was significantly higher in patients with transmural (transmural MI: n = 99, CK-MB = 0.27 +/- 0.04, n = 77: 0.26 +/- 0.03) than in those with subendocardial MI (CK-MB = 0.25 +/- 0.03, n = 63: 0.23 +/-

0.02). The CK-MB levels were higher in patients with right or left ventricular dyskinesia (LVD) (CK-MB = 0.24 +/- 0.03, n = 63) than in those with anterior MI (CK-MB = 0.20 +/- 0.03, n = 117), and those with right or left coronary artery stenosis (CK-MB = 0.23 +/- 0.03, n = 59). The CK-MB levels correlated with the extent of MI (r = 0.88, P less than 0.001). Fifty-four patients with lower CK-MB levels (CK-MB less than 0.20 ng/ml) had no myocardial necrosis on coronary angiography. In 39 patients with MI treated with thrombolytic agents, it was revealed that the CK-MB levels increased more than three times in patients without thrombolytic therapy (C 520fdb1ae7
