Need help? Some of the tool's features may not be available at this time. We apologise for any inconvenience caused and address the issue. How things as mundane as backup drives become objects of desire says so much about sleek design as the value that we exchange in digital storage. Under the glossy black trim of HP SimpleSave hard drives - two portable and three desktop models - sits things we care about: our papers, photos, videos, music and more. They may be copies of files, but we've learned - sometimes the hard way - that there's security in redundancy. I reached for one of the portable with built-in 2.5-inch hard drive, 500GB/Go (right). It's also available in 320GB capacity. Despite the blue LED, which pulsates when the disk connects to the computer using an 18-inch mini-USB to the USB 2.0 cable, the device looks like a 3.2 x 4.9 x 0.63-inch dark chocolate slab. It fits into my shirt pocket (and doesn't melt.) The Standard Windows Dialogue window popped out asking me what I wanted to do. With backup software stored on The SimpleSave drive, I decided to launch the SimpleSave app. After I agreed to legalese, I was amazed to see the message that backup would start in 23 seconds. Faster than Jack Bauer, I stopped the countdown by clicking Options. This will allow me to see the types of default files that will actually back up. Now I can guess HP and choose specific types of files, folders, and locations. Removable drives such as USB flash drives connected to PCs can also be backed up, although by default to skip them. SimpleSave software by default backs up photos, videos and music files. You can add email files, office documents, financial files, Media Center TV shows, web page files, and other files. I went with the default option that covers my media files. There will be more than enough space on the portable drive for their backup storage. So, I clicked well and the progress bar appeared along with a warning not to disable HP SimpleSave Drive! About five minutes later I was greeted by a big green checklist and a message: YOUR COMPTUER now BACKED UP! So many exclamation points! Windows wonk me, I immediately used Explorer to view the files on my chocolate bar. None of them were recognizable. It turns out that SimpleSave is compressing your files and you need to run the HP program again to copy them back to your computer. It may not be all cups of tea. On the other hand, the great advantage of compression is that it results in files that are faster to transmit and store less. Backing up faster and more data being placed on Drive. So if you have a lot of files or disproportionately large files, you'll save time and space using a compression-based system such as SimpleSave, compared to copying files without time, as you could by dragging them to an external drive. Disk. Of course, you don't need to use SimpleSave software. USB hard drive USB hard drive. The same basic software comes from simpleSave Desktop (right). At 2.2 pounds and the size of a thick hardcover, the USB drive uses a AC adapter to power. If you're looking for extra capacity, each of the desktop models are on 1-, 1.5-, and 2-Terabytes, beats bus portable devices. Once you complete the original backup, you can have SimpleSave copy only files that have changed, even automatically backing up changes whenever the computer is idle for 5 minutes. You can also use SimpleSave to back up multiple computers. Supported operating systems are Windows 7, Vista and XP. So in the end you'll sleep better knowing that you left your computer displaying that big green check sign. Find out more Hello everyone, I was trying to figure out what to do because I'm a little lost. So I'm open to advice. My dad has a Windows 7 laptop with a simple save 2tb hdd exterior. It's like 600 pounds on the drive, but I can't figure out what's on it. But the simple software to keep that on the external drive won't work with windows 10. So I can't get anything off the drive once Windows 10 is installed... What can I do here? I could back everything up as if it was a normal hdd, but I still can't get the other 600gbs off it. Page 2 of hp SimpleSave comments is good for users who aren't overly tech-savvy and don't ask for advanced backup requirements. This program will automatically scan all possible files that will back up on your system as long as you connect the HP SimpleSave portable hard drive. So you better keep the drive plugged in your USB port, or the program will re-scan your entire computer and ask you to back up the backup device as long as you reconnect the drive. Because HP SimpleSave may not know that you've been in the process before. Also, it doesn't have a backup version of the files, so the updated files will simply be overwritten, and it can't make a full backup of the system or back up based on folders. And you may come across HP SimpleSave can't access the files issue from time to time.
