free This is a very well done game with very detailed realism. This is an american truck simulator [v 1.7.1.1s 9 dic] video game in which you can drive heavy equipment trucks, and get a feel for the "real" job. The truck is now modifiable, and it has an option for hard or soft suspension! The game has a lot of challenges and missions. The driving is very interesting, you really feel in the truck. The choices are interesting, different types of trucks, and of course different roads! The game has dynamic weather, and a number of advanced driving aids. There are 3D models of roads and signs, where you can find out if there are hazards. But also, there are situations in which there are more obstacles in the way. Traffic lights, and other road users, and even other drivers can collide with your truck. This is a very realistic game, where you will see this all for yourself! The graphics are ok, but the environments are beautiful, and the trucks are very detailed. The graphics are not top of the line, but as the game is only for simulation, it's not too important for visual aesthetics. The sound is very good. The trucks are well detailed in the sound effects, and there are also various engine sounds and other sounds from the environments. There is also a music list, and even an option to change the music! The game has a smooth pace. The driving is not too difficult, but you can get into trouble if you are not careful. This is a very enjoyable game, I'm looking forward to the next updates.Q: is it possible to run a cron job to run a piece of shell script I have a shell script that i want to run every 4 hours. Is there a way of doing this through a cron job rather than running this script manually. Thank you A: From the documentation: cron(8) has a syntax like this: 520fdb1ae7
