Website: : August 4, 2020 Version 7.1.17 - New discount promotion in semester :) - Fixed error that forced termination when removing the category of notes!It's application stability is an app that I've been waiting for. My favorite feature of this app is that it allows me to hand-write notes on a separate notepad while reading and annotating a PDF document. Other apps that I tried before had great support for manually writing notes on blank paper and annotating PDF files, but neither one of them allowed me to do both at once. This feature is very useful if you are reading some PDF documents (research work, presentation slides and/or scanned tutorials) and want to keep your own organized notes to help learning/understanding. Normally there won't be enough space in PDF documents, so you'll have to take notes elsewhere. I tried to get a piece of paper and write notes there. But it's not very convenient, as I'll have to scan my notes later. I also tried splitting the screen and writing notes in another app. But it's not exactly convenient, since the app window will be smaller and I have to zoom in and out a lot. Flexcil does everything I need to. Thank you very much to the developers! Another feature that I would like to see in the future is the ability to customize typed text. Now I couldn't change the color/size of my machine-see time notes. This is not a big problem for me as most of my notes are handwritten, but I think such customization would be great. It's a specially designed application for digital acceptance of notes and documents emphasizing/underlying. The ultimate goal of these activities is to help with learning, memory and information. Flexcil allows you to do these actions with minimal effort with gestures, and these gestures are easy to recognize and intuitive. Integrating with Dropbox and Google Drive makes file management very easy. After using it for a few hours, I would suggest developers find an easier way for users to change existing annotations properties such as highlighted colors, as well as add more custom colors. To do this, please see, for example, the Goodreads app. Also, I think the app can also take advantage of the notes recorded to make them more accessible for further reviews and study by introducing a database that allows tagging and further classification (e.g. Evernotes). To do this, you can also learn some items from the MarginNotes app. However, I believe The app has huge potential and it may well become one of the best platforms for digital learning. I hope this happens soon because I also just paid for a standard :) Hi, I sincerely appreciate you using Flexcil and reaching us. In addition to this, a big thank you for your wonderful compliments along with helpful feedback. This really encourages us to move forward in order to achieve overall flexcil improvement. As you already know, our Flexcil team is committed to creating a more flexible and intuitive work/learning environment for all users across the country. Among the suggestions that you mentioned above, diversification in the colors of the pen is also something that we are considering for further developments. We are thinking about adding bookmark features in the near future as well to help users track their notes as well. So we can safely say that we will consistently work on the development of a more advanced version of Flexcil. If you have any questions regarding Flexcil, please feel free to let us know via support@flexcil.com. Thank you very much. Hope you have a great day today! I gave this app a try for the first time today taking notes on lecture slides for one of my classes. The process of taking notes was reasonable, but not as smooth as possible. The undo button is far from the rest of the email utilities, so it's inconvenient to use and can't be moved closer to the writing tools. Not a big deal, just not optimal. However, I didn't find something very discouraging after finishing the lecture worth taking notes: when I finished my class and wanted to save the file (it's not an automation stored back in the files/ on iCloud, even if the document to be written on selected from such files), I found that this program writes above and below half an inch or so of each slide, making it impossible to read or see any lectures. It's very disappointing to find out after taking full frame notes. I didn't see a warning to first-time users that this would happen since it wasn't present on my slides until after saving them. If these nasty branding bars were added somewhere that didn't erase my notes, it would be so much a problem. They offer a free trial for 10 days, so we'll see if it costs \$10 as an upgrade from the markup. Developer of the website App Support Privacy Policy As the theme says, I want a PDF annotation app that I can annotate PDF, save it locally on the iPad, and not save in the cloud. I should be able to email it myself and I don't want to pay any subscription fees to do so. I also want any comments or annotations I make with app, if I email or send the document back to me, all comments and annotations will be there. Which app is out there that does this? Google search turns out to be #1 app is one with a subscription subscription to use the purchase in the app. I don't want to use anything like that and I want to ask the community here for recommendations. Last edited: August 13, 2019 My Go to is PDF expert Riddle. It can support cloud services, but they don't need to use them. If I remember correctly, it was a one-time purchase. I'm sure there are others out there, I installed on a PDF expert pretty quickly as it was bundled with other great apps like Documents from the same developer. Reaction: 0989382 and my predecessor go to is PDF expert Riddle. It can support cloud services, but they don't need to use them. If I remember correctly, it was a one-time purchase. I'm sure there are others out there, I installed on a PDF expert pretty quickly as it was bundled with other great apps like Documents from the same developer. This is the one that has a monthly subscription to professional features (after a 7-day trial). Free to install at the initial stage. Reaction: 0989382 February 11, 2006 772 273 th. This is the one that has a monthly subscription to professional functions (after a 7-day trial). Free to install at the initial stage. Subscription features seem to be able to set up a toolbar, turn other documents into PDF files, and edit text into PDF. Worth the shot ignore the 7-day trial and see if the free non-pro free features do what you want. I've had the app since I got the first iPad Pro gen w/ Apple Pencil but I only needed to use it a few times. I'm curious if it will meet your needs, I can tinker a little more ... What about the markings? This allows you to annotate the PDF?? (I think iPadOS actually, although the functionality there may not be as reliable as you want.) Last edited: August 13, 2019, September 28, 2016, 133,137 New York pdf-expert has been my favorite for many years. It seems that they have lost their focus recently and a new subscription of \$50 a year is absurdly my current favourite to date PDF viewer worth a look at marginnote and liquidtext (it's not only for iPad though) March 22, 2014 973 399 Derbyshire UK The simple answer for me is: - Notability. I use it to tag all my PDF and share them either as an RTF/PDF/Notability file. Email is supported. August 5, 2008 5,298 6,010 San Jose, Cay. As the theme says, I want a PDF annotation app that I can annotate PDF, save it locally on the iPad, and not save in the cloud. I should be able to email it myself and I don't want to pay any subscription fees to do so. I also want any comments or annotations I make with the iPad app if I'm on the e or send the document back to me, all the comments and annotations will be there. Which app is out there that does this? A Google search turns out to be #1 the app is the one with a subscription paid for for using the in-app purchase. I don't want to use anything like that and I want to ask the community here for recommendations. If uses Goodreader for years. Supports local device storage different clouds, as well as a variety of ways to transfer files to and from (it's not only a PDF reader/markup tool, but also a great general file management tool). You can insert annotations into a PDF file so you can view and edit them using tools like Acrobat on your computer. You can also smooth out the annotations. The app costs \$6, and there's an extra pro package for another \$6, but you probably don't need it. No subscription. Reaction: danmart used PDF expert for years; has always been more than happy to pay for updates to versions and Pro IAP features. But I have to draw the line with overpriced subscriptions. Years ago I used iAnnotate by Branchfire and PDFPen on Smile software. Most likely to migrate back to one of these two. LiquidText seems very good. I'll have OT try iAnnotate and PDFPen to see what they look like. PDF Expert is good, but more recently they have changed to subscription. It's a step back to me. I made a purchase two years ago, then a second purchase to get professional features. Then I owned it straight, but now the app has a constant trip hook wire at every turn to try to get you to subscribe. So for this reason I will also try the other apps mentioned here so far I have to say the PDF expert for free (without subscription) seems to be one of the most interesting to use for annotation and reading. LiquidText is good though and has some quirks. I would like it to be easily pannable/zoomable with a selected stick tool, which some of the other apps don't have a problem with this. April 24, 2015 1394 809 Lancs. UK Another vote for GoodReader. This has been my PDF app of choice ever since I got the iPad 1 back at launch. With my Pro I keep four or five large PDF files open at the same time for cross-referencing, and an abstract with a pencil or finger plus text is super easy. April 8, 2010 1.829 347 Netherlands I used to use a couple of years ago is a very handy side-by-side PDF (divided screen for current and old iPads without Apple separated viewing support) an abstract app called Easy Annotate which still seems to be available for free and 4.99 dollars (once) for pro features. Not sure though it still works so well since it hasn't been updated in about 3 years. Years. best pdf annotation app apple pencil
