Hello – This is my first post on the forum so sorry if any formatting is incorrect. I have read the rules and tried to find solutions in other forum posts and official guides but no luck. I have some issues with getting Gameshark cheat code for Pokemon Fire Red on Boy Advance Games to work. Files for Pokemon Red aren't available on pre-loaded cheats so I've used the guide mentioned below to create new cheat files and load them to my Pi. This appears to have been successful and I can load this created file via Retroarch and see the cheats I've added with the relevant code. However, when I turn on them and click applying they don't seem to work. I'm not sure if there is a problem with my file formatting, I've tried a few different ways as below but nothing seems to work. Is someone else able to get this code working on this particular game or, better yet, is anyone able to share their cheating file format? Just don't know what I'm missing! thank you! I just wanted to get Deoxys in my desmume, but I was confused because I downloaded Gameshark and know how to use it? OK, I have to just use cheats to catch Deoxys in Pokemon diamonds and then complete my collection input and activate this code a05a144c 078b0074 Later, input and activate the following code, and your next random encounter should be Deoxys 022ea6cd 594a7718 d2bf38b5 7e300c38 8343300b adef57ca 27c35f73 a8e9e879 What should I My pikachu to Raichu? I've flattened my Pikachu quite lately, and I found this thunder rock briefly. However, I don't know when to use it. I have tried: I have tried to find a web for help, but there are no good answers. I think it's due: I don't get to this level anymore Growing when you want to. I recommend you wait until it learns all the steps you want because after it grows into Raichu, it won't learn any new steps by leveling down. Depending on what game you have, you should be able to find the most powerful steps it learns in that game and what level of study in Bulbapedia. For example, the most powerful move it studied at Omega Ruby and Alpha Sapphire was the Thunder, which it learned at level 58. It didn't work, and I didn't know what I was doing wrong or how to fix it? So, I am playing differently than the usual version of Pokemon Emerald. What is changing is that Pokemon is a Iohan Pokemon rather than a regular Pokemon. I don't think this affected anything, but I'm just going to throw it away here. Anyway, I entered the master code, and then copied and pasted the salamance code. I'm sure it's Emerald, but it doesn't work. Can anyone help me, please? This way, I also tried many other cheats, but none of them seemed to work. I use GBA. I've done everything I can. I followed the video, but it still didn't work. I've tried: Everything, searched on Google, YouTube and stuff like that. Have tried the same method and several other methods several times, I was positive I didn't do it wrong.
