

大连蓝波机械制造有限公司
Dalian Lanbo Machinery Manufacturing Co., Ltd.

Dalian Lanbo Machinery Manufacturing Co., Ltd.

Company Profile

Founded in 2007, Dalian Lanbo Machinery Manufacturing Co., Ltd. is situated in the beautiful coastal city of Dalian. It was approved by the former Ministry of Railways of the People's Republic of China in 2007 as a designated enterprise for the overhaul of railway diesel engine blocks. The company has a modern factory covering an area of 10,000 m², 138 sets of equipment for the overhaul and maintenance of railway diesel locomotives, and a sound quality assurance system, including the ISO9001 Quality Management System certification. It has applied for 16 utility model patents, 2 invention patents and 13 software copyrights.

In 2019, Dalian Lanbo Machinery Manufacturing Co., Ltd. was awarded the honor of "High-tech Enterprise" by Dalian Municipal Bureau of Science and Technology, Liaoning Province. In 2022, it was recognized as a "Qualified Supplier" by State Power Investment Corporation Limited Inner Mongolia Branch. Since its establishment, the company has successively provided overhaul service for nine railway bureaus, including Harbin Railway Bureau, Shenyang Railway Bureau, Beijing Railway Bureau, Jinan Railway Bureau, Nanchang Railway Bureau, Wuhan Railway Bureau, Zhengzhou Railway Bureau, Hohhot

大连蓝波机械制造有限公司
Dalian Lanbo Machinery Manufacturing Co., Ltd.

Railway Bureau and Urumqi Railway Bureau, and eight locomotive manufacturing plants and overhaul plants in Dalian, Ziyang, Chengdu, Luoyang, Xiangfan, Lanzhou, Liuzhou and Shenyang; and various repair and maintenance services for self-owned diesel locomotives in metallurgy, coal mines, steel, and building materials industries, ports, as well as various engineering bureaus of China Railway Construction Corporation Limited. In 2021, it was enrolled as a qualified supplier for diesel locomotive maintenance outsourcing from CRRC Dalian Co., Ltd. In 2022, it was enrolled as a qualified supplier for diesel locomotive maintenance outsourcing from CRRC Ziyang Co., Ltd.

In order to further study and implement the national major strategic decisions and plans such as the "30·60 emission peak and carbon neutrality" goals and the construction of a new energy oriented railway transportation equipment system, capitalizing on the market demand for new energy locomotives, our company adheres to the philosophy of "progress, innovation, integrity, cooperation and mutual benefit", and has been investing a great deal of human and material resources in the R&D and manufacture of new energy (hybrid and pure electric) remanufacture of diesel locomotives since 2015. On December 28, 2022, the first 6-axle extended range electric shunting locomotive in China was successfully completed in Dalian Lanbo Machinery Manufacturing Co., Ltd. So far, our company has developed mature technologies and capabilities for the remanufacture of hybrid and pure electric locomotives. Up till now, five new energy locomotives remanufactured by our company have been officially delivered to customers for use, contributing to green, environmentally friendly and intelligent railway traction and transportation systems.

Since May 2024, our company began to participate in international projects, which not only enables us to study locomotives from different countries and regions, and understand the latest development, trend and various technologies in the global locomotive maintenance industry, but also helps us broaden our horizons, accumulate abundant experience in international projects and enhance our competitiveness in the global market.

大连蓝波机械制造有限公司
Dalian Lanbo Machinery Manufacturing Co., Ltd.

Enterprise Certificate

Since its establishment, the company has been focusing on innovation and quality, continuously delving into the industry and won numerous honors. Relying on leading technological strength and outstanding product quality, it was awarded the national "High-tech Enterprise" certification, possesses 38 core patent technologies, has a customer satisfaction rate of 97%, secures top 3 position in the market, and passed multiple international standard certifications such as ISO9001 Quality Management System and ISO14001 Environmental Management System, facilitating a 40% increase in production efficiency through standardized management. These honors not only represent the recognition of past achievements, but also drive the company to constantly break through and move towards higher goals.

Overhaul equipment

To continuously enhance the professional level and accuracy for locomotive overhaul, since its establishment, the company has furnished a complete set of advanced overhaul equipment (157 sets till now), including large-scale equipment such as Italian made crankshaft grinders and gear grinders. By empowering the entire overhaul process with technology, it has laid a solid foundation for the efficient and safe operation of locomotives.

Solar-Powered Railway Locomotive Traction Program

Many countries are heavily reliant on oil imports, resulting in persistently high fuel costs for diesel locomotives and putting long-term pressure on transportation costs. By using solar photovoltaic power to replenish the electricity of electric locomotives, the problem can be completely eliminated from the constraints of high fuel prices, significantly reducing logistics expenses. This results in remarkable cost reduction and efficiency improvement, yielding substantial economic benefits and paving a new path for low-cost, green freight transportation.

The railway traction energy sources have evolved from coal to diesel to solar energy in this program.

This program concentrates on solar power generation + energy storage power stations + pure electric/hybrid modular locomotives, and aims to carry out low-cost new-energy remanufacture of a large number of diesel locomotives retired for over 40 years worldwide.

Main achievements

Case I. Remanufacture of 2TE116-2001

The 2TE116 diesel locomotive of Mongolia Railways Corporation is one of the third-generation diesel locomotive models in the former Soviet Union. It was developed by Luhansk Locomotive Manufacturing Plant together with several other institutions in 1971. This locomotive was manufactured in 1984, and was in discarded state before the remanufacture by Dalian Lanbo Machinery Manufacturing Co., Ltd. in October 2024.

Case II. Remanufacture of DF5 diesel locomotive

This decommissioned DF5 diesel locomotive suffered from aging and worn parts, and increasing maintenance cost. The continuous use not only makes it difficult to ensure operation stability and safety, but also affects transportation efficiency, with unsatisfactory emission which is hard to meet current environmental standard. In Dec. 2022, we rebuilt this retired DF5, which was then put into use on the dedicated line of Chinalco Shandong Logistics Branch starting from June 2023. So far, it won great recognition from our client thanks to its satisfactory performance.

Case III. Remanufacture of DF10DD diesel

In May 2023, our company rebuilt the decommissioned DF10DD locomotive of Pingmei Shenma Group, aiming to assist Pingmei Shenma Group in establishing a zero carbon locomotive depot through technological upgrading and optimization. The comprehensive fault diagnosis and safety protection mechanism can prevent the fault from worsening and the occurrence of safety accidents, so as to provide strong support for the operation and development of Pingmei. This is a rechargeable and battery replaceable hybrid locomotive, whose power battery is powered by a solar power station.

Case IV. Remanufacture of GKD3B diesel locomotive

The decommissioned GKD3B locomotive was once an important transportation force in Shuangyashan Coal Mine. However, with the passage of time and the aging of locomotive parts, it failed to meet the current demand for efficient and safe transportation and had been decommissioned for years. Capitalized on our professional technology and rich experience in locomotive remanufacture, we rebuilt this GKD3B locomotive. In terms of power system, we introduced advanced electronic injection technology to improve the fuel efficiency of the engine, and realize stronger and more stable power output; while in the control system, the smart control modules can enhance the convenience and safety of operation. Through a series of upgrading measures, we aimed at revitalizing GKD3B to continue to contribute to the coal transportation industry of Shuangyashan Coal Mine with brand new performance, and bringing the production to a new level.

大连蓝波机械制造有限公司
Dalian Lanbo Machinery Manufacturing Co., Ltd.

Case V. Remanufacture of DFH5 diesel locomotive

Before

After

We have rebuilt the retired DFH5 locomotive. With the persistent efforts of the technical team, the once retired DFH5 locomotive has successfully undergone energy transformation. The rebuilt locomotive adopts advanced new energy technology, which not only significantly reduces energy consumption and environmental pollution, but also greatly improves the stability and reliability of operation. Through this remanufacture, the once discarded resource can be reused, radiating new vitality and energy, and providing a valuable example for the sustainable development of the transportation industry.

Case VI. Remanufacture of Jinchuang 01

Before

After

In October 2025, our company successfully won the bid for the Junchuang diesel locomotive "diesel-to-electric" remanufacture project at Dongbei Special Steel Group Co., Ltd. The locomotive had been left idle in disrepair for long-term due to spare parts shortage. In this remanufacture, pure electric locomotive technical solution was adopted. So far, the rebuilt locomotive has completed commissioning and acceptance successfully, and became the main transport locomotive type in the steel plant.

Overseas performance

Overseas overhaul performance: Kazakhstan

Overseas overhaul performance: American locomotive ES44ACI (Evolution-2101)

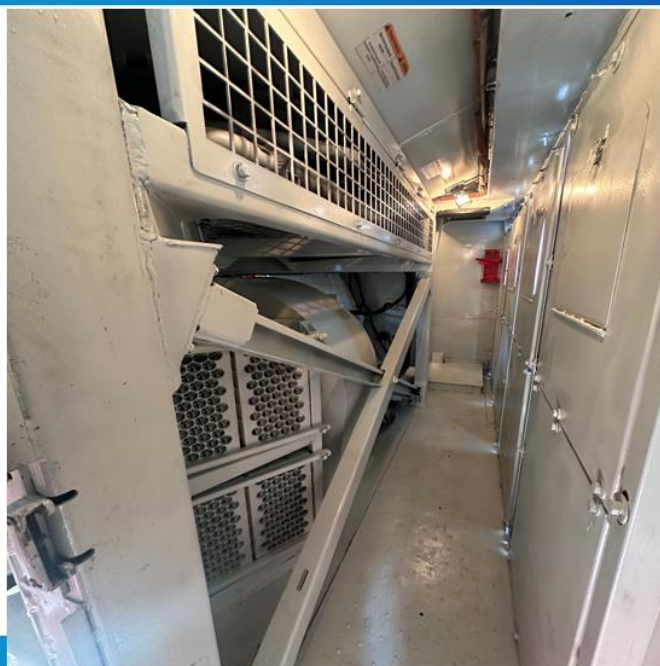

Overhaul of US Locomotive - Evolution

ES44ACI (Evolution) is a model of Evolution series locomotives manufactured by Wabtec in the US, is widely used in the global railway transportation field, and has attracted great attention for its advanced technology and outstanding performance.

This locomotive was transported from Mongolian Railways Corporation to Dalian Lanbo Machinery Manufacturing Co., Ltd. in August 2024. After 90 days, the overhaul was completed, and the commissioning was arranged in February 2025. On March 5, 2025, it was transported to Erlianhot, passed through customs and then was transported back to Mongolian Railways Company.
