## Genetics and heredity vocabulary worksheet

In this lesson, students learn basic concepts of genetics. Students will: distinguish between inherited and acquired traits. genes refer to the inheritance of traits. describe how genes are passed from parent to offspring. Acquired traits: Traits that are learned based on experience or observation of other organisms. Alleles: Alternative forms of the gene that control the same characteristics. Characteristics: A trait or a feature of the body. Chromosome: A tiny filament-like structure in the cells of all organisms, which consists of DNA that carries genetic information. Dominant allele: an allele that is always expressed when it is present in a person. DNA (deoxyribonucleic acid): a molecule in genes that transmits characteristics from one generation to the next. Gene: Part of the chromosome that carries the genetic information that determines the characteristics that organisms inherit from their parents. Erodicity: Transferring traits from parents to their offspring using genes from parents. Inherited traits: The traits with which the body is born are carried on their genes (e.g. a long neck in a giraffe). Recessive allele: an allele that is expressed only when there is no dominant allele for the feature. Trite: a characteristic or feature of living quality. The 45 minute/1 period of The Prerequisite Skills was not included in the lesson plan. Reproduction and Notation Types of Adaptation Reproduction Note: Video Playing may not work on all devices. Training videos were not assigned to the lesson plan. This package contains four resources to help students with definitions and basic concepts of genetics. Dictionary words in a packet genotype, phenotype, homozygotic, heterozygous, codeins, hybrid, genetics, offspring, traits, thoroughbred, genes, alleles, dominant allele, recessive Page 2Oh no!
